automatic code generation is an essential cornerstone of model
driven approaches to software development currently lots of
techniques are available that support the specification and
implementation of code generators such as engines based on
templates or rule based transformations all those techniques have
in common that code generators are either directly programmed or
described by means of textual specifications this monograph
presents genesys a general approach which advocates the graphical
development of code generators for arbitrary source and target
languages on the basis of models and services in particular it is
designed to support incremental language development on arbitrary
metalevels the use of models allows building code generators in a
truly platform independent and domain specific way furthermore
models are amenable to formal verification methods such as model
checking which increase the reliability and robustness of the code
generators services enable the reuse and integration of existing
code generation frameworks and tools regardless of their

complexity and at the same time manifest as easy to use building blocks which facilitate agile development through quick interchangeability both models and services are reusable and thus form a growing repository for the fast creation and evolution of code generators

containing a complete list of the architects of the united states canada cuba and porto rico classified by states and towns etc
