as a seasoned enterprise architect design thinking professional book author and educator i did not write this book because i wanted to become a woocommerce designer or implementation expert i wrote it because i had a simple honest goal to help creators freelancers and startups sell their products and services directly to the people who need them without relying on third party platforms that control the terms fees and future at first i thought setting up my own platform as a sample would be like hanging a painting on a wall choose a frame hammer a nail and step back to admire it but it turned out to be more like wiring a house full of switches hidden systems and fine tuned details that only reveal themselves when the lights fail to turn on that is when i realized woocommerce is powerful but it is not intuitive for people like us creators educators and independent thinkers it assumes you speak a specific language it assumes you are building a store with dozens of products when all you want is to sell one thing well and ensure it reaches your reader with clarity and confidence i started taking notes not for a book but for myself first to track what worked what failed and what i had to fix three times before understanding the cause and the more i documented the clearer it became the best way to learn woocommerce is to treat it like a real life project not a theory not a tutorial but a case study where you build as you go so that is what this book is this is not a developer's handbook or a youtube transcript turned into a how to guide this is a practical realistic walkthrough written during the actual process of selling digital products to all types of internet creators every chapter reflects a decision i made every solution was tested every mistake became a lesson and now i am sharing it with you not because i have mastered everything but because i believe that when

something works it should be passed on in a way that respects people's time and effort. This is how we evolve. If you have ever found yourself thinking, "Why does this checkout look so cluttered? How can I let people download my book without forcing them through PayPal?" Is it this hard just to give someone a file? Then you are exactly who I had in mind when writing this. WooCommerce can feel like building a stage with a hundred lights and cables, but if all you want is to give a great talk in a quiet room with people who care, you do not need all the gear. You need a clear setup, a stable microphone, and a space that allows your voice to come through. That is what we will build together, step by step, with one product, one purpose, and one complete process from start to finish. In a conversational tone, you will not find fluff. Here you will find simple explanations that make sense, even if you are not technical. Hands-on lessons that you can apply immediately. Case study results based on what I tried, including what I would now do differently. This book was not written after I figured everything out; it was written while figuring it out, which means the voice you will hear is not distant or polished. It is present, thoughtful, and grounded in experience. You do not need to be a designer or developer; you need to want control over your work, a better experience for your readers, and a reliable way to sell what you create without losing your sanity. By the time you finish this book, you will not only understand WooCommerce, but you will have used it, refined it, and made it your own for selling your passion. And that is what learning should be: not just theory, but traction.

Sue Polanka brings together a variety of professionals to share their expertise about e-books with librarians and publishers, providing forward-thinking ideas while remaining grounded in practical information that can be implemented in all kinds of libraries. The topics explored include an introduction to e-books and their different types, an overview of their history and development, e-book technology, why e-books are good for learning, and how librarians can market them to a wide range of users.
