this textbook reviews the methodologies of reliability prediction as currently used in industries such as electronics automotive aircraft aerospace off highway farm machinery and others it then discusses why these are not successful and presents methods developed by the authors for obtaining accurate information for successful prediction the approach is founded on approaches that accurately duplicate the real world use of the product their approach is based on two fundamental components needed for successful reliability prediction first the methodology necessary and second use of accelerated reliability and durability testing as a source of the necessary data applicable to all areas of engineering this textbook details the newest techniques and tools to achieve successful reliability prediction and testing it demonstrates practical examples of the implementation of the approaches described this book is a tool for engineers managers researchers in industry teachers and students the reader will learn the importance of the interactions of the influencing factors and the interconnections of safety and human factors in product prediction and testing

the us department of defense dod is faced with an overwhelming task in evaluating chemicals that could potentially pose a threat to its deployed personnel there are over 84 000 registered chemicals and testing them with traditional toxicity testing methods is not feasible in terms of time or money in recent years there has been a concerted effort to develop new approaches to toxicity testing that incorporate advances in systems biology toxicogenomics bioinformatics and computational toxicology given the advances dod asked the national research council to determine how dod could use modern approaches for predicting chemical toxicity in its efforts to prevent debilitating acute exposures to deployed personnel this report provides an overall conceptual approach that dod could use to develop a predictive toxicology system application of modern toxicology approaches for predicting acute toxicity for chemical defense reviews the current state of computational and high throughput approaches for predicting acute toxicity and suggests methods for integrating data and predictions this report concludes with lessons learned from current high throughput screening programs and suggests some initial steps for dod investment

doctoral thesis dissertation from the year 2017 in the subject engineering computer engineering grade 100 00 100 00 Çukurova university language english abstract the purpose of this thesis is twofold the first purpose is to develop new hybrid feature selection based maximal oxygen uptake vo2max prediction models using for the first time the double and triple combinations of maximal submaximal and questionnaire variables several machine learning methods including support vector machine artificial neural network based and tree structured methods combined individually with three feature selectors relief f minimum redundancy maximum relevance mrmr and maximum likelihood feature selector mlfs have been applied for model development the second purpose is to design a new ensemble feature selector which aggregates the consensus properties of relief f mrmr and mlfs to produce more robust decisions about the set of relevantly identified vo2max predictors and to create more accurate prediction models using 10 fold cross validation on three different datasets the performance of prediction models has been evaluated by calculating their multiple correlation coefficients r s and root mean squared errors rmse s the results show that compared with the results of the other regular feature selection based models in literature the reported values of r and rmse of the hybrid models in this thesis are considerably more accurate furthermore prediction models based on the proposed ensemble feature selector outperform the models created by individually using the relief f mrmr or mlfs achieving similar or ideally up to 12 46 lower error rates on the average

person's iq a reliable predictor of success in life it was essential to primarily discuss the definition of intelligence in relation to iq with reference on its impact on success in life whereby it was revealed that even amongst psychologists there is no agreed standard characterization of intelligence in humans as well as there is no consistent perception of success as intelligence measurement is such a disputed yet highly important psychometric paradigm to determine the future potential of an individual this investigation analyses both supportive as well as critical views towards the iq in terms of its reliability in predicting academic professional financial and social success while simultaneously considering its weaknesses and limitations the investigation of studies concerning the correlation of iq and a likely college graduation or iq and financial success has shown that iq can in a certain way be predictive of success in life however the analysis of research that puts the predictive value of the iq in a questionable position suggests that intelligence is not only context dependent and influenced by personality but can also be expressed in different ways hence it seems justifiable that multiple forms of intelligences exist what proves the iq to be a too one sided measurement of intelligence as it does not regard human personality and behavior as a whole in conclusion the intelligence measured by iq tests is a fairly accurate predictor of objective success in terms of academics and professional achievements however there is an individual sense of self fulfillment which always relies on personal traits and motivation hence the predictive validity should not be overestimated and regarded as the ultimate indicator of future success
