this thesis presented about comparison manual and cvt transmission this thesis deals with analysis on performance of transmission for a car under 1 liter engine the objective of this thesis is to compare the performance of transmission between manual transmission and cvt transmission besides that the purpose of this thesis is to analyze the performance of the manual transmission and the cvt transmission for a car under 1 liter engine this thesis also purposes to study the suitability using cvt for a car under 1 liter engine manual transmission and cvt transmission have their own

advantages and one of that is better in their performance in performance there are many category that compared consist of power available tractive force fuel consumption and many more the data used for the analysis is obtained through calculation using specification data that has got from brochure which is downloaded from toyota s official web because this model only market at europe this model fulfilled this project because it had two types of transmission which is cvt transmission and manual transmission the post processing method was performed using manual calculation with certain engineering formula and graph is plotted by using assistance software such as microsoft excel the post processing method to analyze the performance of transmission was performed using the sae definition from the results it is observed that the performance of cvt is better than manual transmission it is also observed that manual transmission is better than cvt in term of fuel consumption for a car under 1 liter engine besides that cvt are suitable to use for a car under 1 liter engine because it gives more power and ride comfort ability future work this comparison between manual transmission and cvt must do in experimental or simulation since cvt technology just begun to blossom to malaysia there are many factors that required to do research by experimental especially in transmission s performance and driveability

this thesis is to research the possibility of improving the performance of continuously variable transmission cvt used in small vehicles such as atvs snowmobiles golf carts and sae baja cars via controlled actuation of the cvt these small vehicles commonly use a purely mechanically controlled cvt that relies on weight springs and cams actuated based on the rotational speed on the unit although these mechanically actuated cbts offer an advantage over manual transmissions in performance via automatic operation they can t reach the full potential of a cvt a hydraulically actuated cvt can be precisely controlled in order to maximize the performance and fuel efficiency but a price has to be paid for the energy required to constantly operate the hydraulics unfortunately for small vehicles the power required to run a hydraulically actuated cvt may outweigh the gain in cvt efficiency the goal of this thesis is to show how an electromechanically actuated cvt can maximize the efficiency of a cvt transmission without requiring too much power to operate abstract

this thesis presented about the comparison of automatic transmission and cvt transmission automatic transmission had been used widely nowadays and the use of cvt transmission progressively increasing automatic transmission and cvt transmission have their own advantages and disadvantages in chapter 4 the performance of each transmission were analysed and the comparison between two transmissions in term of performance is different other than the performances the transmissions also were differentiated in terms of fuel consumption and compatibility to build in a car under 1 litre engine this performance is found by using calculation method and the results have been plot as a graph and
