in this book kajikawa and okamoto explain how to use python to calculate and visualize the optical response of microscopic structures and systems throughout the authors provide varied examples to instruct readers in the application of theoretical knowledge to real world scenarios electromagnetic field analysis is often necessary to determine the optical response of materials with microscopic structures although the principles are widely described the manual calculation and visualization of results are not and remain challenging python is the ideal language to use for this as it has a large functional library for visualizing analysis results and is suitable for programming beginners to use at low cost so it has many advantages over languages like fortran basic and c here the authors introduce the application of python to various electromagnetic field analysis scenarios in the field of nanophotonics the first half of the book describes cases in which there is an analytical solution for the structure and addresses scenarios such as scattering and absorption in spherical and cylindrical structures and complex structures such as rotating ellipsoids sphere aggregated structures and hemispherical structures the second half describes methods including rigorous coupling wave analysis finite difference time domain method and discrete dipole approximation for numerically solving varied structures this book enables readers to conduct their own electromagnetic field analysis quickly cheaply and accurately without in depth study of other complicated and time consuming approaches or programs this book is invaluable for researchers and postgraduate students working in the fields of optics and photonics additionally the contents are useful not only for those conducting electromagnetic field analysis but also those simulating physical chemical and biological phenomena

the considerable number of viral infectious disease threats that have emerged since the beginning of the 21st century have shown the need to dispose global and coordinated responses to fight properly and efficiently against them severe acute respiratory syndrome 2003 avian influenza in humans 2005 a h1n1 pandemic influenza 2009 middle east respiratory syndrome coronavirus mers cov 2012 onward and ebola

virus disease 2014 2015 are some of the most important examples the latest emerging and devastating threat was zika virus an arbovirus that provoked more than 500 000 suspicious cases in the americas in 2016 and notable processes of social and medical alarms due to the evidence of a causal link between zika virus and several congenital injuries like microcephaly as well as due to its association with neurological disorders such as guillain barré syndrome in adults paho 2017 in the framework of this global response and multistrategic approach the purpose of this research topic is to provide updated information and novel researches about control strategies encompassing virological entomological and epidemiological data in order to reach the triad of protagonists of transmission cycles virus mosquitoes and humans
