the goal of this project is to detail the core defining principles of strategic csr that differentiate it as a concept from the rest of the csr sustainability business ethics field it is designed to be a provocative piece but one that solidifies the intellectual framework around an emerging concept strategic csr the foundation for these principles comes from my perspective as a management professor within the business school as such it is a pragmatic philosophy oriented around stakeholder theory that is designed to persuade business leaders who are skeptical of existing definitions and organizing principles of csr sustainability or business ethics it is also designed to stimulate thought within the community of intellectuals and business school administrators committed to these issues but who approach them from more traditional perspectives ultimately therefore the purpose of the strategic csr concept and this book is radical it aims to redefine both business education and business practice by building a theory that defines csr as core to business operations and value creation as opposed to peripheral practices that can be marginalized within the firm these defining principles become applicable across the range of operational functions as such they redefine how businesses approach these functions in practice but also redefine how these subjects should be taught in business schools
