from the preface the object of this little monograph is to indicate the debt of the modern world to the ancient biology and medicine one might as well say simply greek biology and medicine since whether pursued or practiced in ionia in attica or in rome the biology and medicine worthy of our attention were greek in their origin and progress and owed little to the romans the scientific spirit was an endowment of hellas and alien from the genius of rome nor did the romans capture much of it from the gifted race whom they subdued politically and by whose art and literature they were captivated in turn the task before us might make the labor of a lifetime for any writer and the resulting volume would inevitably lead the reader into long winding avenues i offer but a sketch a slight sketch as it were of greek biology and medicine i have endeavored to draw it in such a way as to make clear the nature of their influence upon our intellectual life today so we gain a useful point of view from which to consider the pregnant thoughts and researches of the greeks regarding the nature of animals and plants and their wise practice of the healing art we may profit by the spirit in which they made their investigations and applied a system of therapeutics scientifically based our correlated modern sciences which are called biological because they treat of living organisms have pushed their researches and discoveries far beyond the achievements of the greeks they are not a graft upon a greek stem they have arisen through the direct study of nature not from the old greek books thus they have shown a greek spirit it is in this modern renewal of a scientific mind rather than in any specific borrowings from the ancient stock that we should seek to recognize what greece has been and still may be for us so with medicine the reign of galen ended some

centuries ago but modern medicine in spite of its vastly increased knowledge has never ceased to hark back and often very consciously to the principles of hippocrates with a larger knowledge than his own it rightly reverences the great greek and treads still in his footsteps therefore in considering our debt to greek medicine i shall look to the hippocratic method rather than to specific points of practice referring to these more by way of illustration
