master s thesis from the year 2017 in the subject computer sciences artificial intelligence grade 9 00 lovely professional university punjab lovely professional university punjab course m tech language english abstract residual life prediction is the technique which demonstrates how reliable a particular electronic system or component works under in specific operating conditions the remaining useful life relies on the failure rate of a component and on the operating conditions of a device this failure rate drifts for the duration of the life of the item with time life is an important aspect while choosing the electronic hardware residual life estimation and life prediction are two distinct terms the importance of life estimation is to evaluate the remaining useful life of a specific component under the different stress parameters as an increasing number of components are integrated on to a chip the chances of failure increase as the different parts have their own stress factors and different working conditions so the condition monitoring strategies are utilized which enhances the reliability of a component and a suitable move to be made before any harmful breakdown happens the electronic circuits need a failure estimation technique to protect the system from unavoidable failures residual life estimation of electronic components is an important fact these days as electronic

components and devices becomes a great need of society residual life prediction is predicting the remaining useful life of a component or device based on various failure factors of any component and it also depends on the operating conditions many methods for predicting the life of electronic components have been developed the life of electronic components can be predicted by creating an intelligent system for the failure analysis the capability to predict the life of electronic components is a key to prevent the sudden costly failure and it will increase the overall performance and reliability of a system so remaining useful life prediction is an important factor for every active and passive electronic component such as resistor capacitor and diode etc
