contemporary debates over issues as wide ranging as the protection of wildernesses and endangered species the spread of genetically modified organisms the emergence of synthetic biology and the advance of human enhancement all of which seem to spin into deeper and more baffling questions with every change in the news cycle often circle back to the same fundamental question should there be limits to the human alteration of the natural world a growing number of people view the human capacity to alter natural states of affairs from formerly wild spaces and things around us to crops and livestock to our own human nature as cause for moral alarm that reaction raises a number of perplexing philosophical questions however can we identify natural states of affairs at all does the idea of being morally concerned about the human relationship to nature make any sense should such a concern influence public policy and politics or should government stay strenuously neutral on such matters through a study of moral debates about the environment agricultural biotechnology synthetic biology and human enhancement gregory e kaebnick a research scholar at the hastings center and editor of the hastings center report argues that concerns about the human alteration of nature can be legitimate and serious but also that they are complex contestable and of limited political force kaebnick defends attempts to identify natural states of affairs by disentangling the nature artifact distinction from metaphysical hoariness drawing on david hume he also defends moral standards for the human relationship to nature arguing that they and moral standards generally should be understood as grounded in what hume called the passions yet what counts as natural can be delineated only roughly he concludes and moral standards for interaction with nature are less a matter of obligation than of ideals kaebnick also concludes drawing on an interpretation of the liberal principle of neutrality that government may support those standards but must be careful not to enforce them thus kaebnick looks for a middle way on debates that have tended toward polarization as differences between nature and artifact become steadily less substantial problems about preservation run to the core of how people can make sense of themselves of each other and of our shared world kaebnick s solutions are creative and compelling theoretically elegant and politically practical providing distinctive ways forward when much academic and policy discussion seems exhausted his book demands wide attention in return it inspires hope james nelson michigan state university
