specialist periodical reports provide systematic and detailed review coverage of progress in the major areas of chemical research written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry for over 80 years the royal society of chemistry and its predecessor the chemical society have been publishing reports charting developments in chemistry which originally took the form of annual reports however by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series specialist periodical reports was born the annual reports themselves still existed but were divided into two and subsequently three volumes covering inorganic organic and physical chemistry for more general coverage of the highlights in chemistry they remain a must since that time the spr series has altered according to the fluctuating degree of activity in various fields of chemistry some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

supercritical fluids are neither gas nor liquid but can be compressed gradually from low to high density and they are therefore interesting and important as tunable solvents and reaction media in the chemical process industry by adjusting the density the properties of these fluids can be customised and manipulated for a given process physical or chemical transformation separation and processing using supercritical solvents such as co<sub>2</sub> are currently on line commercially in the food essential oils and polymer industries many agencies and industries are considering the use of supercritical water for waste remediation supercritical fluid chromatography represents another major analytical application significant advances have recently been made in materials processing ranging from particle formation to the creation of porous materials the chapters in this book provide tutorial accounts of topical areas centred around 1 phase equilibria thermodynamics and equations of state 2 critical behaviour crossover effects 3 transport and interfacial properties 4 molecular modelling computer simulation 5 reactions spectroscopy 6 phase separation kinetics 7 extractions 8 applications to polymers pharmaceuticals natural materials and chromatography 9 process scale up
