this book provides a thorough introduction to methods for detecting and describing cyclic patterns in time series data it is written both for researchers and students new to the area and for those who have already collected time series data but wish to learn new ways of understanding and presenting them facilitating the interpretation of observations of behavior physiology mood perceptual threshold social indicator variables and other responses the book focuses on practical applications and requires much less mathematical background than most comparable texts using real data sets and currently available software spss for windows the author employs extensive examples to clarify key concepts topics covered include research design issues preliminary data screening identification and description of cycles summary of results across time series and assessment of relations between time series also considered are theoretical questions problems of interpretation and potential sources of artifact

conventionally time series have been studied either in the time domain or the frequency domain the representation of a signal in the time domain is localized in time i e the value of the signal at each instant in time is well defined however the time representation of a signal is poorly localized in frequency i e little information about the frequency content of the signal at a certain frequency can be known by looking at the signal in the time domain on the other hand the representation of a signal in the frequency domain is well localized in frequency but is poorly localized in time and as a consequence it is impossible to tell when certain events occurred in time in studying stationary or conditionally stationary processes with mixed spectra the separate use of time domain and frequency domain analyses is sufficient to reveal the structure of the process results discussed in the previous chapters suggest that the time series analyzed in this book are conditionally stationary processes with mixed

spectra additionally there is some indication of nonstationarity especially in longer time series
