As one of the primary staple crops, wheat feeds around 35% of the world's population, playing a crucial role in ensuring global food security. Wheat production faces numerous threats, among which pests and diseases cause an estimated 10-16% loss of global wheat yield. Fortunately, some wheat and its related species carry genes that allow for resistance to one or more diseases during the growing period. How to identify, locate, and clone these resistance genes is one of the important keys to rapid and effective wheat breeding for disease-resistant varieties. The utilization of excellent germplasm resources and the cultivation of new varieties cannot be separated from the development of key technologies. Recent innovations in genomic tools have made it possible to edit the susceptible genes in crops, opening up new opportunities in molecular breeding for disease-resistant varieties. Meanwhile, further development of crop variety identification and screening systems to achieve disease-resistant variety isolation and evaluation in a high-precision, high-sensitivity, and high-throughput manner can provide effective technical support for accelerating disease-resistant wheat breeding.

Acupuncture and related techniques are useful tools for treating a spectrum of diseases. However, there are still many areas of controversy surrounding it. We hope this book can contribute to guide the advance of this ancient medical art. In the present work, the reader will find texts written by authors from different parts of the world. The chapters cover strategic areas to collaborate with the consolidation of the knowledge in acupuncture. The book doesn't intend to solve all the questions regarding this issue, but the main objective is to share elements to make acupuncture more and better understood at health systems worldwide.

The research in this book is the result of work begun in the summer of 2003 when the author became involved with the research team investigating the harbour area of Classe in a joint project of the Department of History, Culture, Civilisation, then Department of Archaeology, the Superintendence of Archaeological Heritage of Emilia-Romagna with the Fondazione Ravennantica. The author carried out the cleaning and conservation of metal objects from the excavation, particularly the coins. Part of this work was realised in a postgraduate dissertation that discussed the evidence of the 2002-2003 excavation campaigns in the harbour area of Classe. The archaeological research of the harbour carried out between 2001 and 2005 brought to light a total of 2564 coins, most of which are illegible and in alloys of copper, documenting a chronological range between the 2nd century BC and the 8th century AD. The investigation of the Basilica of San Severo started in the summer of 2006 and is still ongoing. In 2014, however, the coins included in this work are those retrieved between 2006 and 2010. Only in this case, the excavations brought to light a total of 224 coins in alloys of silver, copper, and billon, with a large variety of emissions that witness the settlement of the site between the 1st century BC and the 14th century AD, with a few sporadic modern and contemporary finds of the 20th century. The archaeological contexts studied represent a focal point for the reconstruction of the history of the territory and cover a wide chronological span that is useful for defining the characteristics of the settlement, housing, productive areas, etc., and its evolution.
