acrylic nails are nail enhancements made by combining a liquid acrylic product with a powdered acrylic product

according to nails magazine the two products known as a monomer and a polymer respectively together form a soft ball that can be fashioned into a nail shape once a nail technician applies this acrylic to a client's nails the material hardens and becomes much stronger and then it can be buffed and filed to the customer's liking but wait who invented acrylic nails you might be surprised to learn that acrylics as we know them today were first developed in 1934 by a dentist named maxwell lappe he created these artificial nails in order to help nail biters curb their habit who would've guessed that they'd become such a huge fashion statement in the decades following considering the fact that chemists have developed much better techniques to make acrylic nails look more natural it's no surprise that this beauty treatment still has such an enormous staying power to this day
