unstructured text as one of the most important data forms plays a crucial role in data driven decision making in domains ranging from social networking and information retrieval to scientific research and healthcare informatics in many emerging applications people s information need from text data is becoming multidimensional they

demand useful insights along multiple aspects from a text corpus however acquiring such multidimensional knowledge from massive text data remains a challenging task this book presents data mining techniques that turn unstructured text data into multidimensional knowledge we investigate two core questions 1 how does one identify task relevant text data with declarative queries in multiple dimensions 2 how does one distill knowledge from text data in a multidimensional space to address the above questions we develop a text cube framework first we develop a cube construction module that organizes unstructured data into a cube structure by discovering latent multidimensional and multi granular structure from the unstructured text corpus and allocating documents into the structure second we develop a cube exploitation module that models multiple dimensions in the cube space thereby distilling from user selected data multidimensional knowledge together these two modules constitute an integrated pipeline leveraging the cube structure users can perform multidimensional multigranular data selection with declarative queries and with cube exploitation algorithms users can extract multidimensional patterns from the selected data for decision making the proposed framework has two distinctive advantages when turning text data into multidimensional knowledge flexibility and label efficiency first it enables acquiring multidimensional knowledge flexibly as the cube structure allows users to easily identify task relevant data along multiple dimensions at varied granularities and further distill multidimensional knowledge second the algorithms for cube construction and exploitation require little supervision this makes the framework appealing for many applications where labeled data are expensive to obtain

following criticisms of the traditionally polarized view of understanding suffering through either medicine or social justice Lowe makes a compelling argument for how the medical humanities can help to go beyond the traditional biographical and epistemic breaks to see into the nature and properties of suffering and what is at stake Lowe demonstrates through analysis of major healthcare workforce issues and incidence of burnout how key policies and practices influence healthcare education and experiences of both patients and health professionals by including first person narratives from health professionals as a tool and resource she illustrates how dominant ideas about the self enter practice as a refusal of suffering demonstrating the relationship between personal experience theory and research Lowe argues for a pedagogy of suffering that shows how the moral anguish implicit in suffering is an

ethical response of the emergent self this is an important read for all those interested in medical humanities health professional education person centred care and the sociology of health and illness
