in this volume james and carol gould go in search of the animal mind taking a fresh look at the evidence on animal capacities for perception thought and language the goulds show how scientists attempt to distinguish actions that go beyond the innate or automatically learned they provide captivating beautifully illustrated descriptions of a number of clever and curious animal behaviors some revealed to be more or less preprogrammed some seemingly proof of a well

developed mental life the goulds conclude by examining what animal consciousness studies have revealed about one species in particular ourselves here these expert authors who once counted themselves among the skeptics show just how much opinions have changed they suggest that human and animal consciousness may differ in degree of complexity but not necessarily in kind and that the study of other animal minds can tell us much about our own it is a provocative closing for this examination of one of modern science s most controversial topics

in the bestselling tradition of when elephants weep and dogs don t lie about love inside the animal mind is a groundbreaking exploration of the nature and depth of animal intelligence while in the past scientists have refused to acknowledge that animals have anything like human intelligence a growing body of research reveals otherwise we ve discovered ants that use leaves as tools to cross bodies of water woodpecker finches that hold twigs in their beaks to dig for grubs and bonobo apes that can use sticks to knock down fruit or pole vault over water not only do animals use tools some also display an ability to learn and problem solve based on the latest scientific and anecdotal evidence culled from animal experts in the labs and the field inside the animal mind is an engrossing look at animal intelligence cognitive ability problem solving and emotion george page originator and host of the long running pbs series nature offers us an informed entertaining and humanistic investigation of the minds of predators and scavengers birds and primates rodents and other species illustrated with twenty four black and white photographs the book is the companion to the three part hour long show of the same name hosted by page

this scarce antiquarian book is a facsimile reprint of the original due to its age it may contain imperfections such as marks notations marginalia and flawed pages because we believe this work is culturally important we have made it available as part of our commitment for protecting preserving and promoting the world s literature in affordable high quality modern editions that are true to the original work

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

elephants can count dogs read our expressions cows have personality fish feel pain what do animals know and feel are they creative can they actually make art do they grieve or have agency the ability to make decisions intentionally manipulate other creatures even us or love animals have extraordinary abilities their feelings are much like ours and some of their cognitive skills equal our own inside the animal mind unpacks their inner lives and their relationship to us animal consciousness has long been fascinating but difficult to penetrate today that is changing and fast researchers say that each creature has evolved a suitable intelligence and emotional life for its own role in the world dogs have minds that race though time on the fast track in line with their quick metabolisms cats have a detailed language of meows to communicate specifically with humans the octopus with eight interacting arms has a wildly complex brain readers will learn about how dogs love us the special skills of horse therapists and the wisdom of communities of bees we explore how animals remember how they love the nature of their self awareness and moral codes and how they have fun

animal minds tackles a question that is both fascinating and important the overwhelming body of evidence that donald griffin has assembled puts beyond reasonable doubt the case for recognizing that many non human animals are capable of much more sophisticated thinking than many scientists have been prepared to believe peter singer author of animal liberation

excerpt from the animal mind a text book of comparative psychology the title of this book might more appropriately if not more concisely have been the animal mind as deduced from experimental evidence for the facts set forth in the following pages are very largely the results of the experimental method in comparative psychology thus many aspects of the animal mind to the investigation of which experiment either has not yet been applied or is perhaps not adapted are left wholly unconsidered this limitation of the scope of the book is a consequence of its aim to supply what i have felt to be a chief need of comparative psychology at the present time although the science is still in its formative stage the mass of experimental material that has been accumulating from the researches of physiologists and psychologists is already great and is also for the most part inaccessible to the ordinary student being widely scattered and to a considerable extent published in journals which the average college library does not contain while we have books on animal instincts and on the interpretation of animal behavior we have no book which adequately presents the simple facts probably no bibliography seems to one who carefully examines it entirely consistent in what it includes and what it excludes certainly the one upon which this book is based contains inconsistencies the design has been to exclude works bearing only upon general physiology upon the morphology of the nervous system and sense organs or upon the nature of animal instinct as such and to include those which bear upon the topics mentioned in the chapter headings about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

in these multidisciplinary essays academic scholars and animal experts explore the nature of animal minds and the methods humans conventionally and unconventionally use to understand them the collection features chapters by scholars working in psychology sociology history philosophy literary studies and art as well as chapters by and about people who live and work with animals including the founder of a sanctuary for chickens a fur trapper a popular canine psychologist a horse trainer and an art photographer who captures everyday contact between humans and their animal companions divided into five sections the collection first considers the ways that humans live with animals and the influence of cohabitation on their perceptions of animals minds it follows with an examination of anthropomorphism as both a guide and hindrance to mapping animal consciousness chapters next examine the effects of embodiment on animals minds and the role of animal human interembodiment on humans understandings of animals minds final sections identify historical representations of difference between human and animal consciousness and their relevance to pre established cultural attitudes as well as the ways that representations of animals minds target particular audiences and sometimes produce problematic outcomes the editors conclude with a discussion of the relationship between the book s chapters and two pressing themes the connection between human beliefs about animals minds and human ethical behavior and the challenges and conditions for knowing the minds of animals by inviting readers to compare and contrast multiple uncommon points of view this collection offers a unique encounter with the diverse perspectives and theories now shaping animal studies

excerpt from the animal mind a d104 book of comparative psychology the advance of comparative psychology during the past nine years has been remarkable in preparing a second edition of this book i have tried to include every newly discovered fact of the first importance but the literature is now so extensive that in order to keep the bibliography

within reasonable limits i have had to exercise more selection than i did in preparing the bibliography for the first edition for like reasons the text of the book does not enter so fully into detail in describing the results of a particular investigation as was possible when the material at hand was so much less in amount more than half the book has been completely rewritten including the chapters on vision on spatially determined reactions and on the modification of conscious processes by individual experience i hope that the edition represents an advance upon its predecessor not only by including many newly ascertained facts but also by presenting its subject matter in more logical form about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

the continuities between human and animal minds are increasingly well understood this has led many people to make claims about consciousness in animals which has often been taken to be crucial for their moral standing peter Carruthers argues compellingly that there is no fact of the matter to be discovered and that the question of animal consciousness is of no scientific or ethical significance Carruthers offers solutions to two related puzzles the first is about the place of phenomenal or felt consciousness in the natural order consciousness is shown to comprise fine grained nonconceptual contents that are globally broadcast to a wide range of cognitive systems for reasoning decision making and verbal report moreover the so called hard problem of consciousness results merely from the distinctive first person concepts

we can use when thinking about such contents no special non physical properties no so called qualia are involved the second puzzle concerns the distribution of phenomenal consciousness across the animal kingdom carruthers shows that there is actually no fact of the matter because thoughts about consciousness in other creatures require us to project our first person concepts into their minds but such projections fail to result in determinate truth conditions when those minds are significantly unlike our own this upshot however doesn t matter it doesn t matter for science because no additional property enters the world as one transitions from creatures that are definitely incapable of phenomenal consciousness to those that definitely are namely ourselves and on many views it doesn t matter for ethics either since concern for animals can be grounded in sympathy which requires only third person understanding of the desires and emotions of the animals in question rather than in first person empathy

nature author marianne taylor s the animal mind is a fascinating exploration of animal intelligence and emotion with thought provoking essays surprising insights and breathtaking images by leading photographers joel sartore melissa groo peter delaney and others we are only beginning to understand the ways in which the animal mind is as complex as our own a prairie dog s vocal language is now the most sophisticated ever decoded but their unique jump yip poses as many questions as answers gorillas use sign language to describe past events to researchers so does this mean they ruminate and relive their lives when an ant looks in a mirror to see a dab of blue paint on its head they try to clean it off proving the ant is self aware like us the animal mind profiles 60 animals as it explores instances of remarkable cognition communication consciousness and culture in the animal kingdom full of beautiful portraits and in depth studies showing these behaviors in action the animal mind offers an illuminating roadmap to animal intelligence
