the development of mechatronic and multidomain technological systems requires the dynamic behavior to be simulated before detailed cad geometry is available this book presents the fundamental concepts of multiphysics modeling with lumped parameters the approach adopted in this book based on examples is to start from the physical concepts

move on to the models and their numerical implementation and finish with their analysis with this practical problem solving approach the reader will gain a deep understanding of multiphysics modeling of mechatronic or technological systems mixing mechanical power transmissions electrical circuits heat transfer devices and electromechanical or fluid power actuators most of the book s examples are made using modelica platforms but they can easily be implemented in other 0d 1d multidomain physical system simulation environments such as amesim simulink simscape vhdl ams and so on

the book is intended for students in engineering school or university young engineers or newcomers in the automotive industry or aeronautics the objective is to describe in a simple and clear way the problem of energy and motorization for the automobile helicopters or airplanes the front end treatment of these industrial sectors makes it possible to analyze in an original way the similarities and differences of these different means of transport for this and based on current technologies and tomorrow it specifically describes the problem of the energy requirement of cars and aircraft the result is a search for an ideal motorization associated with the behavior of these different means of transport followed by the analysis of the performances of the various types of engines by covering gas turbines internal combustion engines and electric motors transmission elements such as aerospace gearboxes or gearboxes are described as well as a chapter on energy storage means and their performance including batteries supercapacitors inertial or pneumatic storage hydrogen or fuels from fossil fuels a final chapter shows the interest and prospects of energy hybridization and electrification for the progressive replacement of fossil fuels beyond the technological descriptions the book focuses on proposing basic sizing rules in order to justify certain performances and to give the reader the means to appropriate the basic know how of these industrial sectors

the book consists of chapters based on selected papers of international conference power control and optimization 2012 held in las vegas usa readers can find interesting chapters discussing various topics from the field of power control its distribution and related fields book discusses topics like energy consumption impacted by climate mathematical modeling of the influence of thermal power plant on the aquatic environment investigation of cost reduction in residential electricity bill using electric vehicle at peak times or allocation and size evaluation of distributed generation using ann model and others chapter authors are to the best of our knowledge the originators or closely related to the originators of presented ideas and its applications hence this book certainly is one of the few books discussing the benefit from intersection of those modern and fruitful scientific fields of research with very tight and deep impact on real life and industry this book is devoted to the studies of common and related subjects in intensive research fields of power technologies for these reasons we believe that this book will be useful for scientists and engineers working in the above mentioned fields of research and applications
