this book combines three foreign policy analysis fpa models to explain both how and why the us and uk decided to invade iraq in 2003 these three fpa models each examine a different but closely related aspect of the individual level of decision making firstly groupthink examines how pathologies of small group decision making affected the processes in the us and uk decision to invade iraq secondly the leadership style framework examines how the individual leader s style of exercising their leadership affected the navigation of the decision making process thirdly analogical reasoning examines how decision makers frame their actions both in their own decision making and in how they present their decision to the wider public by achieving these objectives the road to war contributes to the field of fpa and to our understanding of how the decision to invade iraq was taken the comparative use of these fpa models within a single framework means that this book responds to the calls for multifactorial research within fpa proposing and testing a framework that provides more complex answers through adopting a multifactorial framework these more nuanced complex answers then reveal more about the role of the individuals involved in the decision to invade iraq and how their cognition affected the process that led to the decision to invade

this book introduces and details the key facets of combined analysis an x ray and or neutron scattering methodology which combines structural textural stress microstructural phase layer or other relevant variable or property analyses in a single approach the author starts with basic theories related to diffraction by polycrystals and some of the most common combined analysis instrumental set ups are detailed powder diffraction data treatment is introduced and in particular the rietveld analysis is discussed the book also addresses automatic phase indexing a necessary step to solve a structure ab initio since its effect prevails on real samples where textures are often stabilized quantitative texture analysis is also detailed also discussed are microstructures of powder diffraction profiles quantitative phase analysis from the rietveld analysis residual stress analysis for isotropic and anisotropic materials specular x ray reflectivity and the various associated models finally the book introduces the combined analysis concept showing how it is superior to the view presented when we look at only one part of the analyses this book shows that the existence of texture in a specimen can be envisaged as a way to decouple ordinarily strongly correlated parameters as measured for instance in powder diagrams and to examine and detail deeper

material characterizations in a single methodology
