christopher alexander s series of ground breaking books including a pattern language and the timeless way of building have pointed to fundamental truths of the way we build revealing what gives life and beauty and true functionality to our buildings and towns now in the nature of order alexander explores the properties of life itself highlighting a set of well defined structures present in all order and in all life from micro organisms and mountain ranges to good houses and vibrant communities in the phenomenon of life the first volume in this four volume masterwork alexander proposes a scientific view of the world in which all space matter has perceptible degrees of life and sets this understanding of order as an intellectual basis for a new architecture with this view as a foundation we can ask precise questions about what must be done to create more life in our world whether in a room a humble doorknob a neighbourhood or even in a vast region he introduces the concept of living structure basing it upon his theories of centers and of wholeness and defines the fifteen properties from which according to his observations all wholeness is built alexander argues that living structure is at once both personal and structural taken as a whole the four books create a sweeping new conception of the nature of things which is both objective and structural hence part of science and also personal in that it shows how and why things have the power to touch the human heart a step has been taken through which these two domains the domain of geometrical structure and the feeling it creates kept separate during four centuries of scientific thought from 1600 to 2000 have finally been united

humans pose an unprecedented threat to life in all its great diversity of forms the human induced extinction rate has been compared to mass extinctions of the past but this language masks the fact that the crisis is due to voluntary and thus avoidable choices and actions speaking of forms of life shows that at the root of this crisis is the tragic inadequacy of the language predominantly used to represent and address what we are doing including the language of sustainable development rights for animals and the rest of nature their intrinsic value and conservation of species as populations this talk alienates us from the other living things from what they actually are have and do and it perpetuates the harm and loss campagna and guevara compellingly argue on rigorous but accessible grounds that there is an alternative language to guide conservation in confronting the radically urgent ethical issues it faces this is a language with which we are all familiar mastered by

naturalists from aristotle to audubon it articulates the primary value in life and the standard that must guide how human beings should live as one form of life among countless others this book is a homecoming for those who practice conservation to above all else secure a creature's ability to satisfy the necessities of its form of life this is an essential book for anyone who cares about conservation and is concerned about the frightening pace of extinctions the great theme of the book is the importance of the language in which we think and talk about living beings daniel guevara and claudio campagna make available for conservationists the ground breaking work of philippa foot and michael thompson on natural goodness and on our thought about living beings they show how it can be brought to bear on the threats that confront conservation and on disputes that may seem irresolvable i recommend speaking of forms of life as strongly as i can cora diamond william r kenan jr professor emerita of philosophy professor of law and university professor university of virginia our current conservation language is shot through with economic platitudes that don't explain anyone's real motives for conserving biodiversity campagna and guevara's new book lays out a convincing alternative grounding conservation goals in the objective goodness of life's many ways of flourishing speaking of forms of life is inspiring informative well grounded in the relevant philosophy and conservation literatures but never pedantic both activists and thinkers will find much of value in speaking of forms of life philip cafarò professor of philosophy colorado state university speaking of forms of life helps us confront the fact that language often obscures rather than facilitates our understanding of living things our language reflects past misperceptions current ignorance and our shockingly limited intellectual ability to comprehend where we are in space and time and who we are with on this strange planet with its soap bubble coating of life the language in use has abetted and accelerated the catastrophic course we daily continue to choose speaking of forms of life shows us why and how this must change it's a crucial revelation that we must heed because our species alone can consider changing course and our species alone must do so carl safina macarthur fellow carl safina research chair for nature and humanity stony brook university our biosphere is a miracle communicating the sense of awe and wonder that it instills in many of us is essential to shift from wanton destruction of our natural world for short term economic profit to health and prosperity for all creatures including us humans speaking of forms of life is the first book that unveils how the way we speak to each other affects the way we value and care for our planet an essential read for everyone who cares about the future of nature and humanity enric sala national geographic explorer in residence and hubbard medalist

this handbook presents a broad overview of the current research carried out in environmental psychology which puts into perspective quality of life and relationships with living spaces and shows how this original

analytical framework can be used to understand different environmental and societal issues adopting an original approach this handbook focuses on the links with other specialties in psychology especially social and health psychology together with other disciplines such as geography architecture sociology anthropology urbanism and engineering faced with the problems of society which involve the quality of life of individuals and communities it is fundamental to consider the relationships an individual has with his different living spaces this issue of the links between quality of life and environment is becoming increasingly significant with at a local level problems resulting from different types of annoyances such as pollution and noise while at a global level there is the central question of climate change with its harmful consequences for humans and the planet how can the impact on well being of environmental nuisances and threats for example natural risks pollution and noise be reduced how can the quality of life within daily living spaces home cities work environments be improved why is it important to understand the psychological issues of our relationship with the global environment climatic warming ecological behaviours this handbook is intended not only for students of various disciplines geography architecture psychology town planning etc but also for social decision makers and players who will find in it both theoretical and methodological perspectives so that psychological and environmental dimensions can be better taken into account in their working practices
