stock flow adjustments are typically measured as the difference between changes in gross debt and deficits these are interpreted as a proxy for unexplained fiscal discrepancies and often associated with a lack of fiscal transparency however such measures fail to capture the role of financial assets and valuation changes and therefore do not correctly predict fiscal transparency the purpose of this paper is to provide a more detailed exposition of stock flow residuals and the relationship with fiscal transparency highlighting government acquisition of equities and investment fund shares and their performance in secondary markets the results suggest that the performance of government equity portfolios correlates with fiscal transparency to the extent that fully transparent governments are expected to generate between 6 and 8 percent higher returns on their equity portfolios than others these findings suggest that the performance of government assets may be a promising area for future research of fiscal transparency and stock flow residuals

max fry was known internationally for his research on international and domestic financial issues this book draws together contributions from a range of academic and policy making friends and colleagues

the existence of fiat currencies has long been cited as one of the major contributing factors to the challenges facing contemporary economies and the current monetary system is not only a key source of exorable increases in interest rates but also a principal cause of inflation and decline in the value of money in many countries the editors argue that an islamic monetary system with its specific money concepts interest free financial institutions and monetary policy embedded in real growth provides a solution to this conundrum contributions from many world renowned experts consider a wide array of topics ranging from the theoretical concepts of money and banking in conventional and islamic economics to the historical journey of money from precious metals to plastic money and digital currency today the book outlines the problems that sprout from interest based banking and multiple debt structures it then mirrors the islamic concepts of money as well as idiosyncrasies of its monetary policy supported with meticulous research and empirical evidence the book demonstrates the efficacy of islamic monetary system in delivering real growth along with equitable distribution of wealth and prosperity in the economy it additionally acquaints the readers with juristic debates about money and monetary policy this is essential reading for both students and researchers in islamic economics banking and finance expertly promoting a fair and just economic system that emerges as a result of interest free banking and monetary policy based on islamic principles

this collection explores how financial factors have become of key importance for stabilization and growth in developing and transforming economies

this paper examines some of the most vital aspects of korea s experience with capital flows such as the determinants of capital flows the monetary policy on exchange market and the relationships among capital liberalization capital flows domestic credit and exchange market i construct indexes of capital liberalization on controls of capital inflows and outflows based on documented policy changes made by the koran government i use emp exchange market pressure as well as nominal and real exchange rate as terms of exchange market the main findings of this paper are as follows 1 interest rate differentials as a variable of portfolio theory do not explain capital flows in korea the interest rate differential terms are often of the wrong sign so korea s capital flows are not explained by the portfolio theory on the other hand the changes of domestic credit are generally significant in capital flow this result suggests that the monetary approach may be good in explaining capital flows 2 using var framework i find that the change of domestic credit is a good stance of the monetary policy and the negative shock to the change of domestic credit affect the appreciation of nominal and real exchange rate a contractionary monetary policy leads to continuous appreciation and leads to reduce exchange market pressure 3 i cannot reject the null hypothesis that cli is not granger caused by any variables the capital liberalizations in korea are exogeneous 4 i find that capital inflows increase persistently after shocks to liberalization policy while capital outflows increase temporally i also find that shocks to liberalization of capital outflows attract capital inflows 5 domestic credit responds negatively on capital inflows and positively on capital outflows the sterilization was effective for one month after capital inflows 6 the responses of nominal and real exchange rates to capital inflows are negative and exchange rates are appreciated as in theory and empirical tests

this paper uses the flow of funds accounts to assess the impact of a monetary policy shock on the borrowing and lending activities of different sectors of the economy our measures of contractionary monetary policy shocks have the following properties i they are associated with a fall in nonborrowed reserves total reserves m1 the federal reserves holdings of government securities and a rise in the federal funds rate ii they lead to persistent declines in real gnp employment retail sales and nonfinancial corporate profits as well as increases in unemployment and manufacturing inventories iii they generate sharp persistent declines in commodity prices and iv the gdp price deflator does not respond to them for roughly a year after that the gdp price deflator declines our major findings regarding the borrowing activities of different sectors can be

summarized as follows first following a contractionary shock to monetary policy net funds raised by the business sector increases for roughly a year thereafter as the recession induced by the policy shock gains momentum net funds raised by the business sector begins to fall this pattern is not captured by existing monetary business cycle models second we cannot reject the view that households do not adjust their financial assets and liabilities for several quarters after a monetary shock this is consistent with a key assumption of several recent monetary business cycle models

recoge part i convergence between nations and regions in the eu general issues part ii convergence in the eu fiscal and monetary issues part iii convergence in the eu social and labour market issues

the paper investigates cyclical fluctuations in the current and financial formerly capital accounts of the balance of payments and major underlying components for nine industrial countries the empirical model uses as explanatory variables domestic output growth price inflation real exchange rate fluctuations energy price inflation global growth and regional growth the evidence from the estimation of the model indicates the importance of fluctuations in output growth to the cyclicity of the current and financial account balances the necessary and sufficient condition to sustain a large current account deficit is high domestic growth which tends to stimulate financial inflows and provides adequate resources for financing other factors appear to be less important to the cyclicity of the current and financial account balances and their negative correlations
