over the decades cancer immunotherapy has been a burgeoning science in medicine and an established pillar of therapeutic options for diverse cancer types leading the way to success is mainly the discovery and development of immune checkpoint inhibitors icis and chimeric antigen receptor car t cell based therapies under immunotherapy a portion of cancer patients enables to achieve a significant and durable remission with a longer survival time particularly in those with lung cancer melanoma genitourinary cancer etc however striking disparities still exist in the effectiveness of anticancer immunotherapy and cause a great challenge to select appropriate candidates a large part of cancer patients presents limited or no response to immunotherapy mainly attributable to immunotherapy resistance despite of great strides already made the exact mechanism underlying

immunotherapy resistance is still enigmatic immunotherapy resistance is extremely complex and involves voluminous aspects such as tumor intrinsic factors aberrant expression of tumor antigens alterations of signaling pathways etc tumor extrinsic factors local tumor microenvironment etc and host related factors gender age etc more efforts should be made to characterize the underlying mechanism and uncover robust targets for a better response rate

this book develops a new approach to naturalizing phenomenology the author proposes to integrate phenomenology with the mechanistic framework that offers new methodological perspectives for studying complex mental phenomena such as consciousness while mechanistic explanatory models are widely applied in cognitive science their approach to describing subjective phenomena is limited the author argues that phenomenology can fill this gap he proposes two novel ways of integrating phenomenology and mechanism first he presents a new reading of phenomenological analyses as functional analyses such functional phenomenology delivers a functional sketch of a target system and provides constraints on the space of possible mechanisms second he develops the neurophenomenological approach in the direction of dynamic modeling of experience he shows that neurophenomenology can deliver dynamical constraints on mechanistic models and thus inform the search for an underlying mechanism mechanisms and consciousness will be of interest to scholars and advanced students working in phenomenology philosophy of mind and the cognitive sciences

the tumor microenvironment tme plays a pivotal role in cancer progression and response to therapy within this complex milieu immunological niches are specialized microenvironments that support the survival differentiation and function of immune cells profoundly influencing tumor immunity these niches are formed through intricate interactions between tumor cells immune cells and stromal cells mediated by various cytokines chemokines and adhesion molecules the stability and functionality of these niches can be altered by suppressive factors such as  $\text{tgf } \beta$  and  $\text{il } 10$  contributing to tumor immune evasion tumor associated stromal cells also play a critical role in shaping these niches further complicating the immune landscape of the tme key components of immunological niches include tertiary lymphoid structures tls immune checkpoint niches cytokine and chemokine niches stromal and fibroblastic niches metabolic niches epigenetic niches and microbiome associated niches understanding the formation and regulation of these niches is crucial for developing new therapeutic strategies understanding the formation and regulation of immunological niches is crucial for developing new therapeutic strategies targeting these niches can potentially enhance the efficacy of immunotherapies and improve clinical outcomes this research topic aims to explore the clinical value molecular and cellular mechanisms underlying the formation of immunological niches their impact on tumor immune evasion and the development of novel therapeutic approaches to modulate these niches
