in many countries especially in developing countries many people are lacking access to water and sanitation services and this inadequate service is the main cause of diseases in these countries application of appropriate wastewater treatment technologies which are effective low cost in investment and especially in operation and maintenance simple to operate proven technologies is a key component in any strategy aimed at increasing the coverage of wastewater treatment sustainable treatment and reuse of municipal wastewater presents the concepts of appropriate technology for wastewater treatment and the issues of strategy and policy for increasing wastewater treatment coverage the book focuses on the resolution of wastewater treatment and disposal problems in developing countries however the concepts presented are valid and applicable anywhere and plants based on combined unit processes of appropriate technology can also be used in developed countries and provide to them the benefits described sustainable treatment and reuse of

municipal wastewater presents the basic engineering design procedures to obtain high quality effluents by treatment plants based on simple low cost and easy to operate processes the main message of the book is the idea of the ability to combine unit processes to create a treatment plant based on a series of appropriate technology processes which jointly can generate any required effluent quality a plant based on a combination of appropriate technology unit processes is still easy to operate and is usually of lower costs than conventional processes in terms of investment and certainly in operation and maintenance chapters in the book are organized in a practical and accessible way to demonstrate selected unit process of appropriate technology and provide the scientific basis the equations and the parameters required to design the unit processes with some innovations developed by the authors highlight design procedures for selected combined processes which are in use in developing countries propose an innovative orderly design method odm which is easy to follow by practicing engineers using the equations and formulas developed once the fundamentals of each unit and combined process have been established provide a numeric example for the basic design of each selected appropriate technology process for a city with a population of 20 000 using the odm and an excel program which will be provided to the readers for download from an online web page this book is a valuable and practical resource for all wastewater treatment engineers in field and the operational managers of waste treatment facilities authors menahem libhaber phd consulting engineer to the world bank and other institutions alvaro orozco jaramillo msc consulting engineer to the world bank the inter american development bank biwater and other institutions in various countries

water in the meda region is a crucial issue with regard to the availability of renewable water resources in the meda countries most will face even more serious problems in the management of their limited water resources in the near future this will require a lot of efforts to be made for more efficient management of water in order to secure the economic and social development of the coming generations according to the fao 2006 the average of renewable water resources in the mena region is below the limit of 1000 cm per capita and year for egypt for example is this 794 cm for algeria and tunisia 481 cm for jordan 180 yemen 234 and palestine 100 which are far below the limit of 500 cm that classify these countries as the most water stressed countries worldwide the alarming aspect is the fact that the limited renewable available water resources development have been decreasing in the last thirty years between 1974 2000 we had 66 decrease for jordan and 64 for yemen due to the increasing population growth and the increase of water demands for agriculture industrial and domestic use these figures underline the importance of the topics of this book that shall give help to experts and decision makers to overcome the future water resources problems in the region

over the past 50 years the volume of wastewater has grown exponentially as a result of the increasing world population and the expansion of industrial developments researchers all over the world have been trying to address this issue suitably in order to fight water scarcity yet it is only recently that wastewater recycling has caught their attention as an effective and responsible solution wastewater is a resource that can be adequately treated to successfully satisfy most water demands as well as decreasing wastewater discharges and preventing pollution this book presents the studies of some of the most prestigious international

scientists and gathers them in three different sections wastewater management and reuse wastewater treatment options and risk assessment the result is an insightful analysis of waste water management its treatments and the processes that have been studied optimized and developed so far to sustain our environment wastewater reuse and management represents a valuable resource to academic researchers students institutions environmentalists and anyone interested in environmental policies aimed at safeguarding both the quality and the quantity of water

this brief is devoted to clean drinking water which is one of the most important assets in the food and beverage industry in the present time of increasing water scarcity in many areas of the world supply of clean water especially in the production and packaging chain of foods and beverages is a crucial issue this brief hence outlines why functioning purification and reuse systems for wastewater are becoming more and more interesting and promising technologies in solving the challenge readers find in this brief an introduction to different innovative treatment methodologies the authors discuss key parameters such as the water volume to be treated types and chemical and physico chemical characteristics of pollutants but also the intended use of the recycled water and present various methodologies such as separation or concentration systems centrifugation evaporation filtration flotation gravity separation membrane techniques aerobic and anaerobic biological treatments as well as combined or hybrid systems selected specific methods are presented in detail specifically a new adsorption method for the removal of metal ions

this book is a printed edition of the special issue wastewater treatment and reuse technologies that was published in applied sciences

total supply of fresh water on earth far exceeds human demand however scarcity of water currently faced in many regions of the world is caused by two reasons first its availability in time and space is not equally distributed thus there is problem of water in the wrong place or at the wrong time and in wrong quantities second while the population growth and expanded industrial activities are increasing demands on available water resources they also jeopardize the availability of freshwater in adequate quantities by discharge of pollutants into freshwater sources it is at times like these when the rising curve of water demand intersects the fluctuating curve of water availability recycle and reuse of wastewater is seriously considered wastewater

recycling reuse and reclamation have been now accepted as appropriate ways to conserve water resources as well as to contain polluted waters from contaminating other available clean water sources this book gives a comprehensive review on water quantity and quality simple water supply and sanitation systems and leads to domestic agricultural and industrial water reuse thus it will provide useful information not only to technologists but also for planners managers and ngos involved in the water sector the contribution to the book comes from a broad pool of experts working on technology policy health and economy aspects of water management involvement of both academics and industry personnel from developing and developed countries makes this contribution broader and useable for a wide readership
