worldwide there is a generalized trend toward aged societies between 2015 and 2050 the proportion of the world's population over 60 years will nearly double from 12 to 22 as life expectancy continues to increase and natality rates lower not only the composition of countries will change but also its health landscape however an increased life expectancy does not necessarily mean a healthy life in most high income countries more than

20 of those years are lived in ill health due to chronic conditions caused by non communicable diseases which compromises functional ability and well being key components of healthy aging in this way not only people s lives but also societal structures are being affected based on the life course approach to healthy aging aging starts from conception in this regard the promotion of healthy aging requires preventive strategies that enhance capacities during growth and development maintain them for as long as possible after maturity and slow down their rate of decline moreover considering healthy aging across the lifespan entails focusing on different factors life opportunities and choices that might significantly influence health status lifestyle as well as health and social inequalities in older age and challenges the focus of most research on the topic which exclusively investigates the effect of influences operating in the later stages of life
