modern database management systems have hundreds of different configuration parameters knobs that control various aspects of how they behave and perform these knobs must be properly tuned in order to maximize the performance of the database for a given query workload traditionally database administrators would be responsible for database performance tuning however manual configuration tuning is a difficult process for humans as there are hundreds of different inter dependent knobs to be tuned different queries and workloads also benefit from configurations differently there is no one single database configuration that can fit all scenarios we propose blutune a system to automatically produce effective knob configuration for ibm db2 blutune utilizes deep reinforcement learning and features a unique transfer learning approach to training which allows for fast learning in experimental validation blutune demonstrates its capability of producing effective configurations across differing sizes of the tpc ds olap benchmark in a timely manner
