rivers form one of the lifelines in our society by providing essential services such as availability of fresh water navigation energy ecosystem services and flood conveyance because of this essential role mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts this has resulted in often highly engineered rivers with a narrow set of functions in the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes river research and engineering has therefore added to the river fundamentals also themes like ecohydraulics consequences of climate change and urbanisation river flow 2020 contains the contributions presented at the 10th conference on fluvial hydraulics river flow 2020 organised under the auspices of the committee on fluvial hydraulics of the international association for hydro environment engineering and research iahr what should have been a lively physical gathering of researchers students and practitioners was converted into an online event as the covid 19 pandemic hindered international travelling and large gatherings of people nevertheless the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event since its first edition in 2002 in louvain la neuve this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals this is highlighted by the large number of contributions applying for the coleman award for young researchers and also by the number of applications and attendants to the master classes which are aimed at young researchers and students river flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics and contains five major themes which are focus of research in the fluvial environment river fundamentals the digital river the healthy river extreme events and rivers under pressure other highlights of river flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest the contributions will therefore be of interest to academics in hydraulics hydrology and environmental engineering as well as practitioners that would like to be updated about the newest

an introduction to the large eddy simulation les method geared primarily toward hydraulic and environmental engineers the book covers special features of flows in water bodies and summarizes the experience gained with les for calculating such flows it can also be a valuable entry to the subject of les for researchers and students in all fields of fluids engineering and the applications part will be useful to researchers interested in the physics of flows governed by the dynamics of coherent structures

amid increasing interactions with other disciplines and technical advances for detecting monitoring and modeling fluvial landscape origin dynamics and diversity a number of scientific works have come out and nested in globally recognized edited books this book is an attempt in this regard where a few precise regular research works from diverse disciplinary expertise from around the globe are compiled as chapters in this collective effort the application of geoinformatics field data on natural rivers instrumentation use of analytic tools scientific techniques numerical models case studies illustrations etc in understanding formative processes and appraising fluvial landscapes will hopefully provide insight into the current practice of fluvial geomorphology and may guide fruitful and coherent scientific enquiry into the field

this volume consists of twenty chapters addressing different aspects of the theme of fluvial processes and environmental change the overall coverage is broad scientifically from modelling to alluvial dating geographically from arid zone flash flooding to glacial meltwaters and in time from contemporary process studies to the quaternary the introductory chapter sets the context which is an attempt to show how studies of fluvial processes can help us in understanding and therefore predicting the impact of environmental change on our rivers riverine resources and landscapes environmental change includes both climatic factors however caused and human impacts on river basins the differentiation of these two factors is discussed in several chapters whilst others take a more holistic approach both climatic and human factors have and will remain to act together and so their interactions need to be understood fluvial processes and environmental change is divided into five sections commencing with the

slope catchment scale and proceeding to studies of channel response then floodplain processes and floodplain response and finally two studies from glacierised basins the volume originated as a two day session of the british geomorphological research group and contributors from europe the usa and australia were included in order to provide a wide perspective on the topic this book will be a valuable reference for postgraduates and researchers in fluvial geomorphology hydrology quaternary science geology and environmental science
