this is the first systematic scholarly study of the ottoman experience of plague during the black death pandemic and the centuries that followed using a wealth of archival and narrative sources including medical treatises hagiographies and travelers accounts as well as recent scientific research nükhet varlik demonstrates how plague interacted with the environmental social and political structures of the ottoman empire from the late medieval through the early modern era the book argues that the empire's growth transformed the epidemiological patterns of plague by bringing diverse ecological zones into interaction and by intensifying the mobilities of exchange among both human and non human agents varlik maintains that persistent plagues elicited new forms of cultural imagination and expression as well as a new body of knowledge about the disease in turn this new consciousness sharpened the ottoman administrative response to the plague while contributing to the makings of an early modern state
