the encyclopedia of food grains four volume set is an in depth and authoritative reference covering all areas of grain science coverage includes everything from the genetics of grains to the commercial economic and social aspects of this important food source also covered are the biology and chemistry of grains the applied aspects of grain production and the processing of grains into various food and beverage products with the paramount role of cereals as a global food source this encyclopedia is sure to become the standard reference work in the field of science also available online via sciencedirect featuring extensive browsing searching and internal cross referencing between articles in the work plus dynamic linking to journal articles and abstract databases making navigation flexible and easy for more information pricing options and availability visit info.sciencedirect.com written from an international perspective the encyclopedia concentrates on the food uses of grains but details are also provided about the wider roles of grains well organized and accessible it is the ideal resource for students researchers and professionals seeking an authoritative overview on any particular aspect of grain science this second edition has four print volumes which provides over 200 articles on food grains includes extensive cross referencing and further reading lists at the end of each article for deeper exploration into the topic this edition also includes useful items for students and teachers alike with topic highlights learning objectives exercises for revision and exercises to explore the topic further

the ruins of ostia main harbour of imperial rome were uncovered in the late nineteenth and first half of the twentieth century in the present volume the remains of three buildings used for the milling of grain and baking of bread pistrina are studied according to modern archaeological standards a detailed analysis of the architecture and masonry allows a description of the installation and vicissitudes of the pistrina subsequently the distribution of these buildings in the city and their place in the neighbourhood is studied the technical achievement of the ostian bakers is assessed although water power was sometimes used in roman grain mills this was not the case in ostia this in turn affects estimates of the output of the pistrina nevertheless the amount of bread that was produced must have been considerably higher than that in pompeii where many small bakeries have been preserved no remains of bakeries

have ever been found in rome or constantinople but it may be assumed that the average bakery in these cities did not differ much from the ostian workshops involvement of the fisc with the ostian bakers has already been suggested by bakker in living and working with the gods the role of the emperor is dealt with in this volume once more the ostian corpus pistorum presumably fed imperial slaves and the local fire brigade there are good reasons to assume that ostia like rome knew distributions of free grain

special edition of the federal register containing a codification of documents of general applicability and future effect with ancillaries

modern astronomy has stretched its domains of exploration tremendously not only objects at very large distances and very old states of the universe can be examined but also all kinds of radiations and phenomena are now accessible astronomers constantly move from considerations about very luted to very dense systems hot and energetic systems being the easiest to observe have attracted a lot of attention however the cold and low energetic states have been so what neglected either because being harder to observe they appear unexc ing or because being less well known they tend to be ignored however the universe background radiation has now been determined as the most perfect known case of a black body spectrum a substantial fraction of matter spends some time close to the temperature of this universal thermal bath before ingtransformedintostarsorplanets someobjects suchasrapidlyexpanding gas shells in planetary nebulae may even succeed in reaching a temperature well below the background radiation temperature through the mere action of adiabatic expansion in view of the highly dynamical and turbulent state of the interstellar medium hot and cold temperature uctuations must be expected while the clear observational bias is to observe the hot rather than the cold uctuations fortunately with the accessibility of far infrared and sub millimetric instruments such as scuba wmap planck or alma we can expect in the coming years continuous advances in our understanding of these harder to observe cold stages of matter
