in an introduction to the mortuary customs of the north american indians h c yarrow meticulously examines the diverse funerary practices among various indigenous tribes across north america drawing on an array of ethnographic studies yarrow employs a descriptive and analytical literary style that balances both scientific rigor and cultural sensitivity the book places these customs within a broader anthropological context exploring their spiritual social and environmental significance thus enriching the understanding of native american worldviews and their relationship with death and the afterlife h c yarrow was an influential figure in the field of anthropology whose extensive travels and interactions with indigenous peoples profoundly shaped his work his background in medicine and interest in cultural practices led him to document the often misunderstood traditions of native americans driven by a commitment to preserve and honor indigenous knowledge yarrow's research was pioneering for its time providing insights that reflect both reverence and academic inquiry into the cultures he studied this important work is highly recommended for scholars students and anyone intrigued by the intricate tapestry of native american cultures yarrow's nuanced approach invites readers to contemplate the universal themes of life and death making this volume a valuable addition to the library of anthropology and native studies

combining an accessible approach with innovative scholarship carl phelpstead draws on historical context contemporary theory and close reading to deepen our understanding of icelandic saga narratives about the island's early history

the theory of automorphic forms is playing increasingly important roles in several branches of mathematics even in physics and is almost ubiquitous in number theory this book introduces the reader to the subject and in particular to elliptic modular forms with emphasis on their number theoretical aspects after two chapters geared toward elementary levels there follows a detailed treatment of the theory of hecke operators which associate zeta functions to modular forms at a more advanced level complex multiplication of elliptic curves and abelian varieties is discussed the main question is the construction of abelian extensions of certain algebraic number fields which is traditionally called hilbert's twelfth problem another advanced topic is the determination of the zeta function of an algebraic curve

uniformized by modular functions which supplies an indispensable background for the recent proof of fermat's last theorem by wiles
