the demand for more reliable geometric computing in robotics computer vision and graphics has revitalized many venerable algebraic subjects in mathematics among them grassmann cayley algebra and geometric algebra nowadays they are used as powerful languages for projective euclidean and other classical geometries this book contains the author and his collaborators most

recent original development of grassmann cayley algebra and geometric algebra and their applications in automated reasoning of classical geometries it includes two of the three advanced invariant algebras cayley bracket algebra conformal geometric algebra and null bracket algebra for highly efficient geometric computing they form the theory of advanced invariants and capture the intrinsic beauty of geometric languages and geometric computing apart from their applications in discrete and computational geometry the new languages are currently being used in computer vision graphics and robotics by many researchers worldwide

this monograph provides a systematic treatment of the brauer group of schemes from the foundational work of grothendieck to recent applications in arithmetic and algebraic geometry the importance of the cohomological brauer group for applications to diophantine equations and algebraic geometry was discovered soon after this group was introduced by grothendieck the brauer manin obstruction plays a crucial role in the study of rational points on varieties over global fields the birational invariance of the brauer group was recently used in a novel way to establish the irrationality of many new classes of algebraic varieties the book covers the vast theory underpinning these and other applications intended as an introduction to cohomological methods in algebraic geometry most of the book is accessible to readers with a knowledge of algebra algebraic geometry and algebraic number theory at graduate level much of the more advanced material is not readily available in book form elsewhere notably de jong s proof of gabber s theorem the specialisation method and applications of the brauer group to rationality questions an in depth study of the brauer manin obstruction and proof of the finiteness theorem for the brauer group of abelian varieties and  $k3$  surfaces over finitely generated fields the book surveys recent work but also gives detailed proofs of basic theorems maintaining a balance between general theory and concrete examples over half a century after grothendieck s foundational seminars on the topic the brauer grothendieck group is a treatise that fills a longstanding gap in the literature providing researchers including research students with a valuable reference on a central object of algebraic and arithmetic geometry

the original title for this work was mathematical literacy what is it and why you need it the current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners the book is not a mathematical text and there are no assigned exercises or exams it is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing these feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied mathematics education needs a radical reform there is more than one way to accomplish this here the author presents his approach of wrapping mathematical ideas in a story to learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them what is necessary to be mathematically literate it s not about solving algebraic equations or even making a geometric proof these are valuable skills but not evidence of literacy we often seek answers but learning to ask pertinent questions is the road to mathematical literacy here is the good news new mathematical ideas have a way of finding applications this is known as the unreasonable effectiveness of mathematics
