I Project Scoping and Selection

A Project Definition and Objectives Clearly define the projects scope and objectives What problem are you aiming to solve What are the desired outcomes Articulate the projects significance and its relevance to the chemical engineering discipline Establish realistic and achievable goals within the given timeframe and resources

B Project Idea Generation Brainstorm potential design projects based on your interests course content and current industry trends Consult with professors industry professionals and other students for inspiration and feedback Consider the feasibility and practicality of your chosen idea based on available resources and technical limitations

C Literature Review Conduct a thorough literature review to gather information on existing technologies relevant research and similar projects Analyze the strengths and weaknesses of previous approaches to identify potential areas for innovation Utilize databases journals technical reports and industry publications to gather relevant data and information

II Design Methodology and Tools

2 A Process Flow Diagram PFD Development Create a PFD outlining the overall process flow of your design Include all major unit operations equipment and streams Use standardized symbols and conventions to ensure clarity and consistency

B Material and Energy Balances Perform material and energy balances for each unit operation to determine the mass and energy flows Use software tools like Aspen Plus or ChemCAD to assist with calculations and simulations Validate the results by comparing them to expected values and literature data

C Equipment Sizing and Selection Determine the required size and specifications for each piece of equipment based on process parameters and design constraints Utilize databases manufacturers catalogs and industry standards to select appropriate equipment Consider factors like cost availability safety and environmental

impact during selection D Process Simulation and Optimization Use simulation software to model and analyze the entire process Evaluate different design options and optimize the process for efficiency safety and environmental performance Conduct sensitivity analysis to understand the impact of changes in process parameters III Economic Analysis and Feasibility Study A Capital and Operating Costs Estimate the capital costs for equipment construction and installation Determine the operating costs for utilities raw materials labor and maintenance Utilize cost estimation databases and industry benchmarks for accurate calculations B Financial Analysis Conduct a financial feasibility study to assess the profitability of the project Calculate the payback period internal rate of return IRR and net present value NPV to evaluate project viability Consider factors like market demand competition and regulatory compliance in the analysis C Environmental Impact Assessment Evaluate the environmental impact of the process in terms of emissions waste generation and resource consumption Identify potential environmental risks and develop mitigation strategies to minimize negative 3 impacts Consider the application of green engineering principles and sustainable design practices IV Safety and Risk Analysis A Hazard Identification and Risk Assessment Identify potential hazards associated with the design and operation of the process Conduct a risk assessment to determine the likelihood and consequences of each hazard Develop safety procedures and safeguards to mitigate risks and ensure employee safety B Process Safety Management PSM Implement a comprehensive PSM program to manage safety risks throughout the project lifecycle Develop a safety management system that includes procedures for hazard identification risk assessment incident investigation and training Adhere to relevant safety regulations and industry standards V Project Documentation and Communication A Design Report Prepare a detailed design report that summarizes the entire project process Include all relevant information calculations diagrams and analysis Structure the report clearly and concisely with appropriate headings and subheadings B Oral Presentation Develop a clear and engaging presentation to communicate your project findings to your audience Use visual aids like slides diagrams and graphs to enhance understanding Practice your presentation to ensure confidence and fluency C Project Defense Prepare for a formal defense of your project where you will present your findings and answer questions from a panel of experts Anticipate potential questions and prepare detailed responses to ensure a successful defense VI Conclusion The chemical engineering design project is a challenging but rewarding experience that allows students to develop their problemsolving skills creativity and teamwork By following the guidelines outlined in this guide students can successfully navigate the design

process deliver a highquality project and gain valuable knowledge and experience for their future 4 careers Remember This guide provides a general framework and the specific details of your project will depend on your chosen topic objectives and available resources Be sure to consult with your professor mentors and classmates throughout the process to ensure you are on the right track Good luck
