this book constitutes thoroughly refereed post conference proceedings of the 5th international conference on computing and network communications coconet 23 the revised papers presented are carefully reviewed and selected from several initial submissions the scope of the symposium includes network on chip architectures and applications future internet architecture and protocols intelligent networked systems iot and smart cities communications systems integration and modeling and wireless and mobile communications the book is directed to researchers and scientists engaged in network communications

this book provides state of the art approaches to deep learning in areas of detection and prediction as well as future framework development building service systems and analytical aspects in which artificial neural networks fuzzy logic genetic algorithms and hybrid mechanisms are used deep learning algorithms and techniques are found to be useful in various areas such as automatic machine translation automatic handwriting generation visual recognition fraud detection and detecting developmental delays in children deep learning techniques for automation and industrial applications presents a concise introduction to the recent advances in this field of artificial intelligence ai the broad ranging discussion covers the algorithms and applications in ai reasoning machine learning neural networks reinforcement learning and their applications in various domains like agriculture manufacturing and healthcare applying deep learning techniques or algorithms successfully in these areas requires a concerted effort fostering integrative research between experts from diverse disciplines from data science to visualization this book provides state of the art approaches to deep learning covering detection and prediction as well as future framework development building service systems and analytical aspects for all these topics various approaches to deep learning such as artificial neural networks fuzzy logic genetic algorithms and hybrid mechanisms are explained audience the book will be useful to researchers and industry engineers working in information technology data analytics network security and manufacturing graduate and upper level

undergraduate students in advanced modeling and simulation courses will find this book very useful

relevant advances have been accomplished by the scientific community and engineering profession in the design assessment monitoring maintenance and management of sustainable and resilient bridge structures and infrastructures these advances have been presented and discussed at the sixth international conference on bridge maintenance safety and management iabmas 2012 held in stresa italy from 8 to 11 july 2012 iabmas2012 org iabmas 2012 has been organised on behalf of the international association for bridge maintenance and safety iabmas under the auspices of politecnico di milano this book collects the extended versions of selected papers presented at iabmas 2012 and invited papers originally published in a special issue of structure and infrastructure engineering these papers provide significant contributions to the process of making more rational decisions in bridge design assessment monitoring and maintenance the editors would like to thank the authors for their contributions and hope that this collection of papers will represent a valuable reference for scientific research and engineering applications in the fields of design assessment monitoring and maintenance of bridges and infrastructure networks

the twentieth century ended with the vision of smart dust a network of wirelessly connected devices whose size would match that of a dust particle each one a se containedpackageequippedwithsensing computation communication andpower smart dust held the promise to bridge the physical and digital worlds in the most unobtrusive manner blending together realms that were previously considered well separated applications involved scattering hundreds or even thousands of smart dust devices to monitor various environmental quantities in scenarios ranging from habitat monitoring to disaster management the devices were envisioned to se organize to accomplish their task in the most ef cient way as such smart dust would become a powerful tool assisting the daily activities of scientists and en neers in a wide range of disparate disciplines wireless sensor networks wsns as we know them today are the most no worthy attempt at implementing the smart dust vision in the last decade this eld has seen a fast growing investment from both academia and industry signi cant nancial resources and manpower have gone into making the smart dust vision a reality through wsns yet we still cannot claim complete success at present only specialist computerscientists or computerengineershave the necessary background to walk the road from conception to a nal deployed and running wsn system
