Rosenzweig and Thelen found that history as taught in school does not inspire a strong connection to the past and they reveal how race and ethnicity affects how Americans perceive the past while most white Americans tend to think of it as something personal. African Americans and American Indians are more likely to think in terms of broadly shared experiences like slavery, the civil rights movement, and the violation of Indian treaties. Rosenzweig and Thelen's conclusions about the ways people use their personal family and national stories have profound implications for anyone involved in researching or presenting history as well as for all those who struggle to engage with the past in a meaningful way.
