christopher bek has produced a revolutionary physics theory and claims that this theory of one 2001 solves the greatest scientific problem of all time by uniting relativity theory 1905 with quantum theory 1925 according to bek it proves that the universe is bounded at light speed and planck s constant that there is only one photon i e a being of light that one photon is god and that reality is an illusion meaning the moon does not exist when no one is looking at it he says that physicists

are ignoring the theory because it effectively pulls their pants down the theory is dead simple and can be explained in just a few minutes the theory of one brings the reader face to face with the stunning realization that the universe is bounded rather than unbounded as einstein and others have asserted the theory of one delivers the ocean it is the theory that spells the end of physics it is the monolith of 2001 a spacetime odyssey

the oxford handbook of international legal theory provides an accessible and authoritative guide to the major thinkers concepts approaches and debates that have shaped contemporary international legal theory the handbook features 48 original essays by leading international scholars from a wide range of traditions nationalities and perspectives reflecting the richness and diversity of this dynamic field the collection explores key questions and debates in international legal theory offers new intellectual histories for the discipline and provides fresh interpretations of significant historical figures texts and theoretical approaches it provides a much needed map of the field of international legal theory and a guide to the main themes and debates that have driven theoretical work in international law the handbook will be an indispensable reference work for students scholars and practitioners seeking to gain an overview of current theoretical debates about the nature function foundations and future role of international law

karl n llewellyn was one of the founders and major figures of legal realism and his many keen insights have a central place in american law and legal understanding key to llewellyn s thinking was his conception of rules put forward in his numerous writings and most famously in his often mischaracterized declaration that they are pretty playthings previously unpublished the theory of rules is the most cogent presentation of his profound and insightful thinking about the life of rules this book frames the development of llewellyn s thinking and describes the difference between what rules literally prescribe and what is actually done with the gap explained by a complex array of practices conventions professional skills and idiosyncrasies most of which are devoted to achieving a law s larger purpose rather than merely following the letter of a particular rule edited annotated and with an extensive analytic introduction by leading contemporary legal scholar frederick schauer this rediscovered work contains material not found elsewhere in llewellyn s writings and will prove a valuable contribution to the existing literature on legal realism

seminar paper from the year 2014 in the subject politics topic peace and conflict security grade 1 3 university of bamberg language english abstract the united nations un in international relations is considered to be a supranational organization currently the un consist of 193 member states and it stresses out four main purposes which are maintaining peace and security developing friendly relations amongst states helping states to work together and being a centre for harmonizing the actions of nations cf un org en aboutun additionally the un is seen as a collective security system which offers states to settle down any disputes and for solving social economic humanitarian and ecological problems on international level cf gareis varwick 2006 85 according to this purposes the un has acted and authorized multilateral interventions in many states which were affected by conflicts the libyan conflict in 2011 as an example was one of the cases where the un has responded to the actions and the multilateral intervention in libya leaves questions how does the un shape the behavior of its member states and why does the un act in general the theory of social constructivism by alexander wendt can provide an explanation to these questions the theory defines balances of power between states and explains the behavior of states furthermore it claims that international relations are social and the international system is constituted by ideas cf jackson sorensen 2006 162 but the main question which shall be discussed in this term paper is therefore how can the theory of social constructivism explain the actions by the united nations security council in libya first of all core assumptions of social constructivism has to be discussed in order to explain further analysis of this term paper after the illustration of the core assumptions of social constructivism the powers and functions of the un security council shall be described because the

security council as one of the most important main body of the un is the only executive body that act regarding any threat of peace and security thereafter the situation in libya as the empirical example have to be mentioned what exactly happened in libya and what did the un especially the security council do altogether with the core assumptions of social constructivism the theoretical knowledge of the security council and the information of the libyan conflict the main question shall be answered at the end the conclusion shall summarize the term paper s outcome of the analysis

for many years scientists have attempted to unite the four fundamental forces the strong and weak nuclear forces gravity and electromagnetism many have tried uniting known theories such as general relativity with quantum mechanics string theory and even the standard model these theories differ and it seems difficult to find a link to connect them in the theory of everything solved author and researcher lawrence j wippler explains a new theory and provides an alternate understanding of the workings of the atom he found that the four fundamental forces of nature can be united by just three particles the north and south magnetic monopoles and a particle of matter that represents an element he describes how these particles interact with each other and how they are able to create all forms of energy including magnetism and gravity setting aside the presently known theories and laws of physics and attacking the problem from a different perspective wippler kept his assumptions simple when developing the three particle theory in the theory of everything solved wippler shows that the north and south monopoles and a particle of matter are the building blocks of the universe
