the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting communication but also autonomy and proactiveness depend on knowledge the ability to communicate depends on understanding the syntax terms and structure and the semantics of a language ontologies provide the terms used to describe a domain and the semantics associated with them in addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms these constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based
