the 17 sustainable development goals (SDGs) which were adopted by the United Nations in September 2015 are universally applicable in all 193 UN member states and connect the big challenges of our time such as hunger and poverty, climate change, health in an urbanised environment, sustainable energy, mobility, economic development and environmental degradation. Sustainability has the characteristics of a wicked problem for which there are no one-size-fits-all solutions. This book tests the hypothesis that the implementation of sustainable development and in particular the 2015 SDGs requires tailor-made metagovernance or governance of governance. This is necessary to develop effective governance and high quality and inclusive public administration and to foster policy and institutional coherence to support implementing the SDGs based on the growing literature on governance and metagovernance and taking into account the specificities of societal factors such as different values and traditions in different countries. The book presents a framework for the design and management of SDG implementation. It shows how hierarchical, network and market governance styles can be combined and how governance failure can be prevented or dealt with. The book presents an overview of fifty shades of governance which differ for each governance style and a sketch of a concrete method to apply sustainability metagovernance. Metagovernance for sustainability is relevant to academic and practitioner fields across many disciplines and problem areas. It will be of particular interest to scholars, students and policy makers studying sustainable development, governance and metagovernance, public management and capacity building.

Climate change is one of the greatest challenges facing humankind owing to the great uncertainty regarding future impacts which affect all regions and many ecosystems. Many publications deal with economic issues relating to mitigation policies but the economics of adaptation to climate change has received comparatively little attention. However, this area is critical and a central pillar of any adaptation strategy or plan and is the economic dimension which therefore merits the increase in attention it is receiving. This book deals with the difficulties that face the economics of adaptation. Critical issues include uncertainty, baselines, reversibility, flexibility and adaptive management, distributional impacts, discount rates and time horizons, mixing monetary and non-monetary evaluations and limits to the use of cost-benefit analysis, economy-wide impacts and cross-sectoral linkages. All of these are addressed in the book from the perspective of economics of adaptation. Other dimensions of adaptation are also included such as the role of low and middle income countries, technology and the impacts of extreme events. This timely book will prove essential reading for international researchers and policy makers in the fields of natural resources, environmental economics and climate change.

For courses in markets and institutions or money and capital markets, this book helps prepare students for careers in finance by describing a wide range of instruments for financing, investing and controlling risk available in today's financial markets.

This timely book explores the measurement and consequences of financialisation as well as its driving forces to take a fresh look at reconciling the

twin concepts of financialisation and financial development imad moosa provides a critical review of these two separate strands the individual measures of economic development and financialisation on the grounds that they are inadequate to represent a multi dimensional process
