the complexity diversity and random nature of transportation problems necessitates a broad analytical toolbox describing tools commonly used in the field statistical and econometric methods for transportation data analysis second edition provides an understanding of a broad range of analytical tools required to solve transportation problems it includes a wide breadth of examples and case studies covering applications in various aspects of transportation planning engineering safety and economics after a solid refresher on statistical fundamentals the book focuses on continuous dependent variable models and count and discrete dependent variable models along with an entirely new section on other statistical methods this edition offers a wealth of new material new to the second edition a subsection on tobit and censored regressions an explicit treatment of frequency domain time series analysis including fourier and wavelets analysis methods new chapter that presents logistic regression commonly used to model binary outcomes new chapter on ordered probability models new chapters on random parameter models and bayesian statistical modeling new examples and data sets each chapter clearly presents fundamental concepts and principles and includes numerous references for those seeking additional technical details and applications to reinforce a practical understanding of the modeling techniques the data sets used in the text are offered on the book s crc press web page powerpoint and word presentations for each chapter are also available for download

the book s website with databases and other support materials can be accessed here praise for the second edition the second edition introduces an especially broad set of statistical methods as a lecturer in both transportation and marketing research i find this book an excellent textbook for advanced undergraduate master s and ph d students covering topics from simple descriptive statistics to complex bayesian models it is one of the few books that cover an extensive set of statistical methods needed for data analysis in transportation the book offers a wealth of examples from the transportation field the american statistician statistical and econometric methods for transportation data analysis third edition offers an expansion over

the first and second editions in response to the recent methodological advancements in the fields of econometrics and statistics and to provide an increasing range of examples and corresponding data sets it describes and illustrates some of the statistical and econometric tools commonly used in transportation data analysis it provides a wide breadth of examples and case studies covering applications in various aspects of transportation planning engineering safety and economics ample analytical rigor is provided in each chapter so that fundamental concepts and principles are clear and numerous references are provided for those seeking additional technical details and applications new to the third edition updated references and improved examples throughout new sections on random parameters linear regression and ordered probability models including the hierarchical ordered probit model a new section on random parameters models with heterogeneity in the means and variances of parameter estimates multiple new sections on correlated random parameters and correlated grouped random parameters in probit logit and hazard based models a new section discussing the practical aspects of random parameters model estimation a new chapter on latent class models a new chapter on bivariate and multivariate dependent variable models statistical and econometric methods for transportation data analysis third edition can serve as a textbook for advanced undergraduate masters and ph d students in transportation related disciplines including engineering economics urban and regional planning and sociology the book also serves as a technical reference for researchers and practitioners wishing to examine and understand a broad range of statistical and econometric tools required to study transportation problems
