the introductory chapter consists of four sections in sect 1 1 we reveal the c rent situation in hospitals
that is faced by the management we address the general issue of personnel scheduling in the service
industry in sect 1 2 then we motivate our research by considering physicians as the scheduling object

in particular we show the complex nature of physician scheduling in a hospital environment the focus of the research is presented in sect 1 3 finally we conclude the chapter by illustrating the outline of the thesis 1 1 general economic situation in hospitals the mounting pressure in the health care industry to reduce costs is forcing hos tals and related facilities to take a closer look at their staf ng policies see 111 a primary dif culty in reducing personnel costs the major component of the budget is the variability in demand and the need to assign staff to xed shifts furthermore government run facilities especially those in the european union are seeing their budgets cut in terms of real dollars despite an aging and more acutely ill patient population e g see 96 it has been reported that up to a third of the hospitals in germanyplan a reductionin staff see 91 the schedulingprocess is furtherc plicated by the generally recognized importance of taking individual preferences intoaccount moreattractiveschedulespromotejobsatisfaction increaseproduct ity and reduceturnover cf 2 however withoutimproveschedulingprocedures that better match supplyto demand the level of care that theynow providewill soon become unsustainable 1

the exploration of the subnuclear world is done through increasingly complex experiments covering a wide range of energy and performed in a large variety of environments ranging from particle accelerators underground detectors to satellites and the space laboratory the achievement of these research programs calls for novel techniques new materials and instrumentation to be used in detectors often of large scale therefore fundamental physics is at the forefront of technological advance and also leads to many applications among these are the progresses from space experiments whose results allow the understanding of the cosmic environment of the origin and evolution of the universe after the big bang

this book presents the henstock kurzweil integral and the mcshane integral these two integrals are obtained by changing slightly the definition of the riemann integral these variations lead to integrals which are much more powerful than the riemann integral the henstock kurzweil integral is an unconditional integral for which the fundamental theorem of calculus holds in full generality while the mcshane integral is equivalent to the lebesgue integral in euclidean spaces a basic knowledge of introductory real analysis is required of the reader who should be familiar with the fundamental properties of the real numbers convergence series differentiation continuity etc

since the entry into force of the treaty of lisbon key improvements have occurred in the democratisation of eu international relations through the increased powers of the european parliament nevertheless a comprehensive legal analysis of the new developments in democratic control of eu external action has not yet been performed this book aims to improve the understanding of the set of mechanisms through which democratic control is exerted over eu external action in times of

profound transformations of the legal and political architecture of the european integration process it analyses the role of the court of justice in the democratisation of international relations through eu law and further provides a legal overview of the role of the european parliament in the conduct of the eu s international relations in those areas where the powers of the parliament have greatly increased the book aims to raise questions as to whether this enhanced position has contributed to a more consistent external action at the same time the book aims to contribute to the debate on judicial activism in connection with the democratisation of eu external action it offers the reader a detailed and topical analysis of the recent developments in democratic control of external action which are of relevance in the daily practice of eu external relations lawyers including the topic of mixed agreements this text will be of key interest to scholars and students working on eu external relations law eu institutional law european union studies politics international relations and more broadly to policy makers and practitioners particularly to those with an interest on the european parliament and the court of justice of the european union

the authors explain in this work a new approach to observing and controlling linear systems whose inputs and outputs are not fixed in advance they cover a class of linear time invariant state signal system that is general enough to include most of the standard classes of linear time invariant dynamical systems but simple enough that it is easy to understand the fundamental principles they begin by explaining the basic theory of finite dimensional and bounded systems in a way suitable for graduate courses in systems theory and control they then proceed to the more advanced infinite dimensional setting opening up new ways for researchers to study distributed parameter systems including linear port hamiltonian systems and boundary triplets they include the general non passive part of the theory in continuous and discrete time and provide a short introduction to the passive situation numerous examples from circuit theory are used to illustrate the theory

provides an in depth and even treatment of the three pillars of computational intelligence and how they relate to one another this book covers the three fundamental topics that form the basis of computational intelligence neural networks fuzzy systems and evolutionary computation the text focuses on inspiration design theory and practical aspects of implementing procedures to solve real world problems while other books in the three fields that comprise computational intelligence are written by specialists in one discipline this book is co written by current former editor in chief of ieee transactions on neural networks and learning systems a former editor in chief of ieee transactions on fuzzy systems and the founding editor in chief of ieee transactions on evolutionary computation the coverage across the three topics is both uniform and consistent in style and notation discusses single layer and multilayer neural networks radial basis function networks and recurrent neural networks covers fuzzy set theory fuzzy relations fuzzy logic interference fuzzy clustering and classification fuzzy

measures and fuzzy integrals examines evolutionary optimization evolutionary learning and problem solving and collective intelligence includes end of chapter practice problems that will help readers apply methods and techniques to real world problems fundamentals of computational intelligence is written for advanced undergraduates graduate students and practitioners in electrical and computer engineering computer science and other engineering disciplines

this book contains a collection of articles on different aspects of eu law written by one of europe s most distinguished jurists during the past twenty years some of which appear here for the first time in english the book includes a preface by judge koen lenaerts vice president of the european court of justice the book is divided into five parts covering eu constitutional law the eu s judicial architecture access to justice european competition law and various other aspects of substantive eu law in the field of eu constitutional law the central text discusses the existence of implied material limits to the revision of the treaties the author argues that the powers of the member states to amend the treaties is limited by the existence of a hard core of principles of eu treaty law which cannot be revised without changing the constitutional identity of the union leading to the conclusion that member states can no longer be considered as the absolute masters of the treaties four articles relating to the eu s judicial system constitute the cornerstone of the collection drawing on his own experiences the author examines the problems and challenges facing the setting up of a new eu court and explores different lines of reform of the eu judicial system
