about 13.5 billion years ago matter, energy, time and space came into being in what is known as the big bang. The story of these fundamental features of our universe is called physics. About 300,000 years after their appearance, matter and energy started to coalesce into complex structures called atoms, which then combined into molecules. The story of atoms, molecules and their interactions is called chemistry. About 3.8 billion years ago, on a planet called earth, certain molecules combined to form particularly large and intricate structures called organisms. The story of organisms is called biology. About 70,000 years ago, organisms belonging to the species *Homo sapiens* started to form even more elaborate structures called cultures. The subsequent development of these human cultures is called history. Three important revolutions shaped the course of history: the cognitive revolution, which started about 70,000 years ago; the agricultural revolution, which sped it up about 12,000 years ago; and the scientific revolution, which got under way only 500 years ago. It may well end history and start something completely different. This book tells the story of how these three revolutions have affected humans and their fellow organisms.

Africa does not give up its secrets easily. Buried there lie answers about the origins of humankind, and yet though vital clues still remain hidden, scientists have over the last century transformed our understanding about the beginnings of human life. In *Born in Africa*, Martin Meredith follows scientists' trail of discoveries about human origins, recounting their intense rivalry, personal feuds and fierce controversies, as well as their feats of skill and endurance, and he limns their momentous accomplishments. Scientists have identified more than twenty species of extinct humans; they have firmly established Africa as the birthplace not only of humankind but also of modern humans. They have revealed how early technology, language ability and artistic endeavour all originated in Africa, and they have shown how small groups of Africans spread out from Africa in an exodus sixty thousand years ago to populate the rest of the world.
