this authoritative work now thoroughly revised has given thousands of clinicians students and researchers a state of the art understanding of the human frontal lobes the large brain region that plays a critical role in behavior cognition health and disease reflecting a decade s worth of important research advances in such areas as functional connectivity mapping of frontal and frontal subcortical circuits the third edition is updated throughout it incorporates rich recent discoveries about both normal and abnormal conditions including significant new information on frontotemporal dementia ftd and an expanded section on neuropsychiatric disorders illustrations include eight pages in full color dust jacket

from pavlov s dog expecting food when hearing a bell to stereotypes as expectations about other people s behaviour from bandura s self efficacy as expectation for success and failure of one s own behaviour to the predictive brain concept in current perception theories expectations have been a central construct in different areas of psychological research in each of these areas specific concepts theoretical approaches and empirical methods have been developed to explain when and why expectations persist and when they do not many theories assume that expectations are likely to change in the face of disconfirming evidence however sometimes expectations persist even though they are empirically violated suggesting that they can be sticky under certain circumstances but what are these circumstances and what are the psychological mechanisms that can explain why and when expectations persist or change after being confronted with expectation violating evidence each contribution of the current book offers insights into individuals reactions to violations of expectations they show that many pieces of the puzzle have been collected in the many sub disciplines of psychology and that putting them together in an integrative fashion stays a fascinating enterprise

multitasking refers to performance of multiple tasks the most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks i e dual tasking or executing multiple tasks in varying sequences i e task switching in the literature numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and or sequentially active component of task sets in these situations however these approaches have been rather vague regarding explanatory concepts e g task set inhibition preparation shielding capacity limitation widely lacking theories on detailed mechanisms and or empirical evidence for specific subcomponents the present research topic aims at providing a selection of

contributions on the details of executive functioning in dual task and task switching situations the contributions specify these executive functions by focusing on 1 fractionating assumed mechanisms into constituent subcomponents 2 their variations by age or in clinical subpopulations and or 3 their plasticity as a response to practice and training
