this important guide is considered to be the bible on serial protocols for programmers it includes coverage of internet related communication programming issues and provides a powerful and general protocol construction kit

this book is for people who have done some programming either in prolog or in a language other than prolog and who can find their way around a reference manual the emphasis of this book is on a simplified and disciplined methodology for discerning the mathematical structures related to a problem and then turning these structures into prolog programs this book is therefore not concerned about the particular features of the language nor about prolog programming skills or techniques in general a relatively pure subset of prolog is used which includes the cut but no input output no assert retract no syntactic extensions such as if then else and grammar rules and hardly any built in predicates apart from arithmetic operations i trust that practitioners of prolog programming who have a particular interest in the finer details of syntactic style and language features will

understand my purposes in not discussing these matters the presentation which i believe is novel for a prolog programming text is in terms of an outline of basic concepts interleaved with worksheets the idea is that worksheets are rather like musical exercises carefully graduated in scope each worksheet introduces only a limited number of new ideas and gives some guidance for practising them the principles introduced in the worksheets are then applied to extended examples in the form of case studies

this book constitutes the proceedings of the second international conference on bridging the gap between ai and reality aisola 2024 which took place in crete greece in october november 2024 the papers included in this book focus on the following topics ai assisted programming digital humanities approaches of using formal methods and ai in health care models for trustworthy autonomous systems responsible and trusted ai safe autonomous vehicles statistical model checking verification and learning for assured autonomy verification for neuro symbolic artificial intelligence
