the previous saas fee advanced course dedicated to the interstellar medium took place in 1972 the tremendous scientific advances that have occurred in this field since then in particular owing to the availability of receivers working at completely unexplored wavelength bands fully justified a new set of lectures as a consequence the members of the swiss society for astrophysics and astronomy voted that the galactic interstellar medium should be the subject of the 1991 course the 21st saas fee advanced course took place in les diablerets from 18 to 23 march 1991 gathering together about 80 participants from all over the world but mostly from europe according to a rule that has proved to lead to success but also to challenge the lecturers energy the format of a saas fee advanced course consists traditionally of 28 lectures of 45 minutes which take place in the morning and late afternoon leaving ample time for discussions self study hiking or skiing despite the inordinate work load imposed this year's lecturers felt that the subject was sufficiently dense to increase the lecture time by 1/3 this proved judicious and left more time for questions and discussions during the lectures

the stars that comprise a halo around our galaxy are intriguing they have abundances of elements that suggest they are old the properties of these hot stars and similar stars in other galaxies challenge the current well established theory of stellar evolution in many ways studying the collective properties of these stars provides important input to many areas of astrophysics including the formation of our galaxy the late phases of stellar evolution and the stellar populations of other galaxies the study of hot stars in the halo of our galaxy is undergoing an exciting renaissance owing to important new observations with the hubble space telescope and astro1 and to techniques recently developed for ground based observations advances in computers have also recently led to a far more detailed and complete theoretical understanding of stellar evolution a conference was held in union college new york to gather experts in the field and this volume draws together their articles to provide an up to date and comprehensive review

for graduate students and researchers

our knowledge of the environment of the nucleus of our galaxy has been greatly enhanced by more extensive and sensitive observations at radio and infrared wavelengths the advent of high resolution x ray imaging and spectroscopy and considerable theoretical activity to understand the nucleus and its components and their activity the galactic center workshop 2002 was organized to review recent research on the galactic center including the latest state of the art observations and important theoretical developments the workshop covered phenomena on scales ranging from the central several hundred parsecs to the central parsec and within each topic was approached from both multi wavelength observational and theoretical perspectives

the investigation of the galactic nucleus and its surroundings is necessarily a modern endeavor for traditional observations made at visual wavelengths have not even begun to penetrate the veil of 30 magnitudes of visual extinction that intercedes on the other hand infrared and especially radio observers find a relatively unobstructed view of the central portion of the galaxy so the study of this arena has proceeded apace with the development of these branches of astronomy thus it is no accident that the first iau sponsored conference to be held on the galactic center is timed to coincide with the initiation or the immediate aftermath of major technical developments at long wavelengths including infrared array detectors millimeter wavelength aperture synthesis and self calibration and refined deconvolution algorithms in aperture synthesis radio astronomy the center of the galaxy is also accessible to x and gamma ray observers and progress at high energies has been steady especially as imaging capabilities are being realized at x ray wavelengths however one might expect that the revolution in the high energy domain is still ahead of us as instruments with larger collecting areas and improved spatial resolution are now being developed the youth of this subject is evidenced by the relatively small number of meetings that have been devoted to it
