in this book we study decision trees for fault diagnosis in circuits and switching networks which are among the most fundamental models for computing boolean functions we consider two main cases when the scheme circuit or switching network has the same mode of operation for both calculation and diagnostics and when the scheme has two modes of operation normal for calculation and special for diagnostics in the former case we get mostly negative results including superpolynomial lower bounds on the minimum depth of diagnostic decision trees depending on scheme complexity and the np hardness of construction diagnostic decision trees in the latter case we describe classes of schemes and types of faults for which decision trees can be effectively used to diagnose schemes when they are transformed into so called iteration free schemes the tools and results discussed in this book help to understand

both the possibilities and challenges of using decision trees to diagnose faults in various schemes the book is useful to specialists both in the field of theoretical and technical diagnostics it can also be used for the creation of courses for graduate students

within an increasingly multimedia focused society the use of external representations in learning teaching and communication has increased dramatically this book explores how we can theorise the relationship between processing internal and external representations

in the newly revised twelfth edition of physics volume 2 an accomplished team of physicists and educators delivers an accessible and rigorous approach to the skills students need to succeed in physics education readers will learn to understand foundational physics concepts solve common physics problems and see real world applications of the included concepts to assist in retention and learning the text includes check your understanding questions math skills boxes multi concept problems and worked examples the second volume of a two volume set volume 2 explores ideas and concepts like the reflection refraction and wave particle duality of light throughout students knowledge is tested with concept and calculation problems and team exercises that focus on cooperation and learning
