problem of memory we must bear constantly in mind the facts that our consciousness is a unit and that this unit of consciousness works through various sheaths which impose upon it a false appearance of multiplicity the innermost or most tenuous of these sheaths is inseparable from the unit of consciousness in fact it is this sheath which makes it a unit this unit is the monad dwelling on the anupadaka plane but for all practical purposes we may take it as the familiar inner man the tri atom atma buddhi manas thought of as apart from the atmic buddhic and manasic sheaths this unit of consciousness manifests through abides in sheaths belonging to the five planes of its activity and we call it the self working in its sheaths we must think then of a conscious self dwelling in vehicles that vibrate the vibrations of these vehicles correspond on the side of matter with the changes in consciousness on the side of the self we cannot accurately speak of vibrations of consciousness because vibrations

for the last four centuries science has tried to account for everything in terms of atoms and molecules and the physical laws they adhere to recently this effort was extended to try to include the inner world of human beings gary lachman argues that this view of consciousness is misguided and unfounded he points to another approach to the study and exploration of consciousness that erupted into public awareness in the late 1800s in this secret history of consciousness consciousness is seen not as a result of neurons and molecules but as responsible for them meaning is not imported from the outer world but rather creates it in this view consciousness is a living evolving presence whose development can be traced through different historical periods and which evolves along a path to a broader more expansive state what that consciousness may be like and how it may be achieved is a major concern of this book lachman concentrates on the period since the late 1800s when madame blavatsky first brought the secret history out into the open as this history unfolds we encounter the ideas of many modern thinkers from esotericists like p d ouspensky rudolf steiner and colin wilson to more mainstream philosophers like henri bergson william james owen barfield and the psychologist andreas mavromatis two little known but important thinkers play a major role in his synthesis jurij moskvitin who showed how our consciousness relates to the mechanisms of perception and to the external world and jean gebser who presented perhaps the most impressive case for the evolution of consciousness an important contribution to the study of consciousness a must read

charles sievert presents a distinctive approach to consciousness that emphasizes our first person knowledge of experience and argues that we should grant consciousness understood in this way a central place in our conception of mind and intentionality written in an engaging manner that makes its recently controversial topic accessible to the thoughtful general reader this book challenges theories that equate consciousness with a functional role or with the mere availability of sensory information to cognitive capacities sievert argues that the notion of phenomenal consciousness slighted in some recent theories can be made evident by noting our reliance on first person knowledge and by considering from the subject's point of view the difference between having and lacking certain kinds of experience this contrast is clarified by careful attention to cases both actual and hypothetical indicated by research on brain damaged patients ability to discriminate visually without conscious visual experience what has become known as blindsight in addition sievert convincingly defends such approaches against objections that they make an illegitimate appeal to introspection experiences that are conscious in sievert's sense differ from each other in ways that only what is conscious can in phenomenal character and having this character gives them intentionality in sievert's view consciousness is involved not only in the intentionality of sense experience and imagery but in that of nonimagistic ways of thinking as well consciousness is pervasively bound up with intelligent perception and conceptual thought it is not mere sensation or raw feel having thus understood consciousness we can better recognize how for many of us it possesses such deep intrinsic value that life without it would be little or no better than death
