this textbook introduces spectral theory for bounded linear operators by focusing on i the spectral theory and functional calculus for normal operators acting on hilbert spaces ii the riesz dunford functional calculus for banach space operators and iii the fredholm theory in both banach and hilbert spaces detailed proofs of all theorems are included and presented with precision and clarity especially for the spectral theorems allowing students to thoroughly familiarize themselves with all the important concepts covering both basic and more advanced material the five chapters and two appendices of this volume provide a modern treatment on spectral theory topics range from spectral results on the banach algebra of bounded linear operators acting on banach spaces to functional calculus for hilbert and banach space operators including fredholm and multiplicity theories supplementary propositions and further notes are included as well ensuring a wide range of topics in spectral theory are covered spectral theory of bounded linear operators is ideal for graduate students in mathematics and will also appeal to a wider audience of statisticians engineers and physicists though it is mostly self contained a familiarity with functional analysis especially operator theory will be helpful
