by demonstrating that western conceptions of civil society have provided the framework for interpreting societies in the global south decolonizing civil society in mozambique argues that it is only through a critical deconstruction of these concepts that we can start to re balance global power relationships both in academic discourse and in development practices examining the exclusionary discourses framing the support for western type ngos in the development discourse often to the exclusion of local social actors this book dissects mainstream contemporary ideas about civil society and finds a new means by which to identify local forms of social action often based in traditional structures and spiritual discourses outlining new conceptual ideas for an alternative framing of mozambique s civil society kleibl proposes a series of fresh theoretical issues and questions alongside empirical research moving towards a series of new policy and practice arguments for rethinking and decolonizing civil society in the global south

neuroscience has largely abandoned its localizationist and mechanistic framework of the 20th century the plastic embodied and network character of our nervous system is widely acknowledged and systems theory approaches to consciousness dominate the field however the underlying neuron theory has not changed the neuron doctrine conceptualizing the single neuron as atomistic one directional source of neural function still provides the template for our understanding of these basic elements of our nervous system and the material foundation of consciousness yet the single neuron does not exist as an isolated unit it is embedded within multiple cellular structural and functional contexts and highly depends on them for its development neural activity and survival the book discusses the constraints of the neuron doctrine and its pragmatic reductionism in the light of the growing knowledge about the brain s connectivity plasticity and systemic and embodied nature to overcome these constraints the author argues for a new neuron theory depicting the neuron as bidirectional hub which is at the same time source and product of neural function this bidirectionality is further characterized by spatial and time dimensions placing the neuron within a multi level pathway model of psychobiological development from the perspective of developmental embodiment research furthermore the author discusses the potential of neuroepigenetic markers to characterize the neuron and its range of plasticity within this developmental perspective with its focus on neuroepigenetics the book addresses a knowledge gap in the current study of the neural foundations of psychological functions the multi level and bidirectional perspective is already realized in approaches coming from developmental systems theory which model neural function at the connectome level and it also fits with approaches investigating feedback loops underlying neural activity at the single cell level at both these levels the spatial and the time dimensions are well characterized either as changing connectivity patterns across different age groups or as synaptic feedback loops underlying neural activation patterns however for the intermediate level of small neural populations which is currently the main target for studies investigating the neural basis of specific psychological functions this characterization turned out to be more challenging multi cell recordings have provided a first glimpse into the complex interaction patterns of these small neural networks but they are limited to the recording period and do not provide information about the long term developmental and activation history here neuroepigenetic markers could be of use due to their relative stability and at the same time environmental sensitivity neuroepigenetic markers represent an additional layer of information in which to a certain degree the cell s metabolic and activation history is aggregated over time this information is available at the single neuron level but could also be modeled as aggregated information for small neural populations and the supporting cellular context looking through this epigenetic lens adds to our understanding of the neuron as bidirectional hub by emphasizing the molecular correlates of functional stabilization and their contextual prerequisites these prerequisites reach from the immediate cellular context to the social cultural contexts which shape the culturally specific modes of acquisition of psychological functions throughout the lifespan accounting for this multilayered contextuality of the neuron and its function affords to repositions the relationship between neuroscience and psychology in their joint effort to unravel the material basis of consciousness this provides new challenges but also new

perspectives for theoretical psychology the book presents these current developments and debates to researchers graduate students and interested professionals and practitioners working in neuroscience epigenetics psychiatry psychology and psychotherapy it also provides a basic introduction into neuroepigenetics its mechanisms and first findings for graduate students as well as interested professionals and practitioners working in psychiatry psychology and psychotherapy

this book offers a novel examination of socio environmental change in a nomadic pastoralist area of the eastern tibetan plateau drawing on long term fieldwork that underscores an ethnography of local nomadic pastoralists international development organisations and chinese government policies the book argues that careful analysis and comparison of the different epistemologies and norms about change are vital to any critical appraisal of developments often contested on the grasslands of eastern tibet tibetan nomads have developed a way of life that is dependent in multiple ways on their animals and shaped by the phenomenological experience of mobility these pastoralists have adapted to many changes in their social political and environmental contexts over time from the earliest historically recorded systems of segmentary lineage to the incorporation first into local fiefdoms and then into the chinese state of both nationalist and communist governments tibetan pastoralists have maintained their way of life complemented by interactions with the outside world rapid changes brought about by an intensification of interactions with the outside world call into question the sustained viability of a nomadic way of life particularly as pastoralists themselves sell their herds and settle into towns this book probes how we can more clearly understand these changes by looking specifically at one particular area of high altitude grasslands in the tibetan plateau

the emergence of global knowledge societies is recently questioning the meaning and relevance of local knowledge in the context of southern countries women have proved to be the central actors in the multiple channels of local global networking using these new social ties for the negotiation of old and new elements of knowledge scientific knowledge and development discourses the inherent politicisation of knowledge and the direct objective of transforming societal institutions are not only signs of resistance against global hegemony but serve for a new definition and for a defence of local culture and of local knowledge

an examination of approaches to counterinsurgency from 30 recent resolved campaigns reveals that good coin practices tend to run in packs and that the balance of selected good and bad practices perfectly predicts the outcome of a conflict

despite the increase in funding for research and the rising numbers of peer reviewed publications over the past decade that address the environmental health and safety aspects of engineered nanomaterials enms uncertainty about the implications of potential exposures of consumers workers and ecosystems to these materials persists consumers and workers want to know which of these materials they are exposed to and whether the materials can harm them industry is concerned about being able to predict with sufficient certainty whether products that it makes and markets will pose any environmental health or safety issues and what measures should be taken regarding manufacturing practices and worldwide distribution to minimize any potential risk however there remains a disconnect between the research that is being carried out and its relevance to and use by decision makers and regulators to make informed public health and environmental policy and regulatory decisions research progress on environmental health and safety aspects of nanomaterials evaluates research progress and updates research priorities and resource estimates on the basis of results of studies and emerging trends in the nanotechnology industry this report follows up the 2012 report a research strategy for environmental health and safety aspects of engineered nanomaterials which presented a strategic approach for developing the science and research infrastructure needed to address uncertainties regarding the potential environmental health and safety risks posed by enms this new report looks at the state of nanotechnology research examines market and regulatory conditions and their affect on research priorities and considers the criteria for evaluating research progress on the environmental health and safety aspects of nanotechnology
