markov chain monte carlo and sequential monte carlo approaches many examples illustrate the algorithms and theory the book also carefully treats gaussian linear state space models and their extensions and it contains a chapter on general markov chain theory and probabilistic aspects of hidden markov models this volume will suit anybody with an interest in inference for stochastic processes and it will be useful for researchers and practitioners in areas such as statistics signal processing communications engineering control theory econometrics finance and more the algorithmic parts of the book do not require an advanced mathematical background while the more theoretical parts require knowledge of probability theory at the measure theoretical level from the reviews by providing an overall survey of results obtained so far in a very readable manner and also presenting some new ideas this well written book will appeal to academic researchers in the field of hmms with phd students working on related topics included it will also appeal to practitioners and researchers from other fields by guiding them through the computational steps needed for making inference hmms and or by providing them with the relevant underlying statistical theory in the reviewer s opinion this book will shortly become a reference work in its field mathscinet this monograph is a valuable resource it provides a good literature review an excellent account of the state of the art research on the necessary theory and algorithms and ample illustrations of numerous applications of hmm it goes much beyond the earlier resources on hmm i anticipate this work to serve well many technometrics readers in the coming years haikady n nagaraja for technometrics november 2006

this book presents an innovative concept for the realization of sensors based on a planar metamaterial microwave array and shows their application in biomedical analysis and treatment the sensors are able to transduce the dielectric properties of materials in their direct vicinity into an electric signal the specific array

organization permits a simultaneous analysis of several materials using a single readout signal or a relative characterization of one material where information about its spatial distribution can be extracted two applications of the designed sensors are described here the first is a cytological screening using micro fluidic technology which shows that the sensors may be integrated into lab on chip technologies the second application regards the use of the sensor in both the analysis and treatment of organic tissues the developed sensor is able not only to screen the tissues for abnormalities but also by changing the applied signals to perform thermal ablation and treat the abnormalities in a highly focused way thus the research described in this book represents a considerable advancement in the field of biomedical microwave sensing
