understanding basin fill evolution and the origin of stratal architectures has traditionally been based on studies of outcrops well and seismic data studies of and inferences on qualitative geological processes and to a lesser extent based on quantitative observations of modern and ancient sedimentary environments insight gained on the basis of these studies can increasingly be tested and extended through the application of numerical and analogue forward models present day stratigraphic forward modelling follows two principle lines 1 the deterministic process based approach ideally with resolution of the fundamental equations of fluid and sediment motion at all scales and 2 the stochastic approach the process based approach leads to improved understanding of the dynamics physics of the system increasing our predictive power of how systems evolve under various forcing conditions unless the system is highly non linear and hence difficult or perhaps even impossible to predict the stochastic approach is more direct relatively simple and useful for study of more complicated or less well understood systems process based models more than stochastic ones are directly limited by the diversity of temporal and spatial scales and the very incomplete knowledge of how processes operate and interact on the various scales the papers included in this book demonstrate how cross fertilization between traditional field studies and analogue and numerical forward modelling expands our understanding of earth surface systems

the ordovician was one of the longest of the geological periods characterized by major magmatic and tectonic activity an immense biodiversification swings in climate and sea levels and the first phanerozoic mass extinction a global synthesis of the ordovician system is presented in two volumes in the geological society special publications whereas the first volume sp532 concentrates on general aspects and a synthesis of the ordovician geology of europe this volume sp533 includes reviews of ordovician successions of most other parts of the world the classic successions of the ordovician basins of north america are presented as well as those of china where several of the ordovician global boundary stratotype sections and points are defined the volume also includes syntheses of the ordovician geology of africa south america most regions of asia from the near to the far east along with central asia as well as australia new zealand and antarctica

this volume brings together state of the art reviews of the non biostratigraphic and biostratigraphic data that are used to define and correlate permian time intervals it

includes analyses of permian radio isotopic ages magnetostratigraphy isotope based stratigraphy and timescale relevant biostratigraphy it is the first book devoted to this subject and represents the cutting edge of permian time scale research

examining plant fossils and their role in geological investigations this textbook explores the techniques for studying plant fossils the problems of taxonomy relevant to palaeobotany and the use of plant fossils for palaeoecology palaeogeography and palaeoclimatology in the palaeozoic period

significant problems have arisen in the past with dating and correlating stratigraphical sequences impoverished in or barren of fossil remains leaving major questions in stratigraphy for periods dominated by non marine formations these problems are exacerbated in dating and correlating barren sequences encountered in offshore exploration and appraisal drilling where the potential of alternative techniques becomes economically extremely important brought together in this volume is a wide range of diverse techniques and disciplines broadly grouped into mineralogical chemical isotopic luminescence and cyclicity analyses to explore their potential in solving difficulties in stratigraphy the intention is also to introduce these techniques already familiar to specialist researchers to a wider audience of petroleum geologist who may find them useful in resolving their specific correlation problems the book will be of particular interest to hydrocarbon exploration and production geologists provided by publisher

publishing the results of general interest arising from research undertaken by elf exploration production particularly at the research centre or by scientists working in collaboration with elf exploration production
