from dating to choosing permanent partners and from raising children to relating to one's parents and even the departed this guide helps readers use their intuition to make the right choices

historic protestantism and evangelicalism has always been committed to the authority of scripture and interested in the proper interpretation of the bible they uphold the motto as scripture says god says and as god says scripture says many today claim this type of reasoning is faulty since individuals can no longer know the true meaning of scripture because there are no stable metaphysical or epistemological frameworks moreover they claim that approaches such as the one presented by carl f h henry no longer provide adequate grounds to address the pressing hermeneutical issues this study responds to these types of claims showing each of these proposals is based upon faulty first principles or misrepresentations this book surveys hermeneutical innovations and henry's epistemological hermeneutic to show that henry's epistemology is foundational to his hermeneutic offering present day evangelicals an epistemologically justified approach to hermeneutics as epistemology and methodology the book will be of importance to those with interest in evangelical hermeneutics or philosophical hermeneutics in general it provides a clear assessment of the impact of carl f h henry's epistemology and hermeneutic and strives to respond to criticisms raised against his augustinian reformed revelational cognitive propositional hermeneutic

what exactly makes the nature of organizations so miraculous that their very purpose is to achieve performance and that it is now regarded in this capitalist age of ours as the central aim to be both possible and desirable for any organization after all there is simply no lack of organizations which achieve performance with questionable

means and goals be they about greed and excess in the corporate world or evil and injustice in the public sphere just to cite two main examples although there are others too of course contrary to the conventional wisdom preciously accepted by many contemporaries this obsessive craze for organizational performance is fast becoming a seductive trend such that the dark sides of organizational performance have yet to be systematically understood and that its very purpose is neither possible nor desirable to the extent that its proponents would like us to believe needless to say this is not to suggest that the purpose of organizations is to reject performance or that the literature in organizational studies and other related fields like political science media studies and business management for example hitherto existing in history are full of scholarly worthlessness the aim of this book however is to provide an alternative better way to understand the nature of organization in special relation to communication decision making and leadership while learning from different views in the literature without favoring any one of them nor integrating them and in the end transcending them in a new direction not thought before this seminal project if successful will radically change the way that we think about the nature of organization from the combined perspectives of the mind nature society and culture with enormous implications for the human future and what i originally called its post human fate

in a complex and uncertain world humans and animals make decisions under the constraints of limited knowledge resources and time yet models of rational decision making in economics cognitive science biology and other fields largely ignore these real constraints and instead assume agents with perfect information and unlimited time about forty years ago herbert simon challenged this view with his notion of bounded rationality today bounded rationality has become a fashionable term used for disparate views of reasoning this book promotes bounded rationality as the key to understanding how real people make decisions using the concept of an adaptive toolbox a repertoire of fast and frugal rules for decision making under uncertainty it attempts to impose more order and coherence on the idea of bounded rationality the contributors view bounded rationality neither as optimization under constraints nor as the study of people s reasoning fallacies the strategies in the adaptive toolbox dispense with optimization and for the most part with calculations of probabilities and utilities the book extends the concept of bounded rationality from cognitive tools to emotions it analyzes social norms imitation and other cultural tools as rational strategies and it shows how smart heuristics can exploit the structure of environments

previous studies conducted within the aviation industry have examined a multitude of crucial aspects such as policy airline service quality and revenue management an extensive body of literature has also recognised the importance of decision making in aviation with the focus predominantly on pilots and air traffic controllers understanding decision making processes in airline operations control focuses instead on an area largely overlooked an airline's operations control centre occ this serves as the nerve centre of the airline and is responsible for decision making with respect to operational control of an airline's daily schedules the environment within an occ is extremely intense and a key role of controllers is to make decisions that facilitate the airline's recovery from frequent highly complex and often multiple disruptions as such decision making in this domain is critical to minimise the operational commercial and financial impact resulting from disruptions the book examines many aspects of individual decision making in airline operations and addresses the deficiencies found by presenting to the reader an examination of the relationships among situation awareness information completeness experience expertise decision considerations and decision alternatives in occs the text utilises a multiple case study approach and proposes a number of relevant and important implications for occ management practical outcomes highlight the need for enhancing training programs enabling existing controllers to readily identify and classify elements of situation awareness and decision considerations as a means of improving the decision making process they also draw attention to the need for airline occs to understand the extent to which industry experience and expertise of controllers is important in the selection of future staff
