the present volume brings together current interdisciplinary research which adds up to an evolutionary theory of human knowledge le evolutionary epistemology it comprises ten papers dealing with the basic concepts approaches and data in evolutionary epistemology and discussing some of their most important consequences because i am convinced that criticism if not confused with mere polemics is apt to stimulate the maturation of a scientific or philosophical theory i invited reinhard low to present his critical view of evolutionary epistemology and to indicate some limits of our evolutionary conceptions the main purpose of this book is to meet the urgent need of both science and philosophy for a comprehensive up to date approach to the problem of knowledge going beyond the traditional disciplinary boundaries of scientific and philosophical thought evolutionary epistemology has emerged as a naturalistic and science oriented view of knowledge taking cognizance of and compatible with results of biological psychological anthropological and linguistic inquiries concerning the structure and development of man s cognitive apparatus thus evolutionary epistemology serves as a frame work for many contemporary discussions of the age old problem of human knowledge

since the dawn of time human beings have had to make decisions wise or foolish thoughtful or instinctive altruistic or selfish and from the most simple to the most complex decision making enables people to confront and overcome constant environmental challenges yet despite the momentousness of decision making in adaptability terms men and women ignore the actual process that takes place in their minds when for example they invest in the stock market buy a car trust a person they just met or simply decide to go to the movies while some decisions are taken in a few seconds when we act impulsively without time to evaluate the process other decisions require considerable cognitive effort and accurate cost benefit analysis but is it only the optimal decision that deserves to be called rational if this is the case how then can we

explain the wisdom of our instincts of our emotions of our sixth sense moreover what is the role of subjectivity free will desire or culture in the decision making process research on decision making has had a long and controversial history the idea of a perfect rationality has more recently given way to the idea of a rationality conscious of its incompleteness to a process that cannot be expressed or conceived in logical or rational terms in this ground breaking book author mauro maldonato reinterprets the secular controversy about the nature of human decision making in light of recent discoveries in cognitive neurosciences and new research neuroeconomics and neuroethics at the end of this literary excursion along a stunning archipelago of rationality morality emotion and consciousness the reader is provided with the means to view and assess personal decision making and resultant action in a completely different way a way that impacts positively on human interaction and psychological wholeness
