in recent years the proliferation of available video content and the popularity of the
internet have encouraged service providers to develop new ways of distributing
content to clients increasing video scaling ratios and advanced digital signal
processing techniques have led to internet video on demand applications but these
currently lack efficiency and quality scalable video on demand adaptive internet
based distribution examines how current video compression and streaming can be
used to deliver high quality applications over the internet in addition to analysing the

problems of client heterogeneity and the absence of quality of service in the internet this book assesses existing products and encoding formats presents new algorithms and protocols for optimised on line video streaming architectures includes real world application examples and experiments sets out a practical toolkit for dynamically reconfigurable multimedia distribution systems written by an expert in the field of video distribution scalable video on demand adaptive internet based distribution provides a novel approach to the design and implementation of video on demand systems for software engineers and researchers it will also be useful for graduate students following electronic engineering and computer science courses

modern current and future communications processing aspects motivate basic information theoretic research for a wide variety of systems for which we do not have the ultimate theoretical solutions for example a variety of problems in network information theory as the broadcast interference and relay channels which mostly remain unsolved in terms of determining capacity regions and the like technologies such as 5 6g cellular communications internet of things iot and mobile edge networks among others not only require reliable rates of information measured by the relevant capacity and capacity regions but are also subject to issues such as latency vs reliability availability of system state information priority of information secrecy demands energy consumption per mobile equipment sharing of communications resources time frequency space etc this book composed of a collection of papers that have appeared in the special issue of the entropy journal dedicated to information theory for data communications and processing reflects in its eleven chapters novel contributions based on the firm basic grounds of information theory the book chapters address timely theoretical and practical aspects that constitute both interesting and relevant theoretical contributions as well as direct implications for modern current and future communications systems
