first published in 1995 bohm one of the foremost scientific thinkers of our time and hiley present a completely original approach to quantum theory which will alter our understanding of the world and reveal that a century of modern physics needs to be reconsidered

quantum field theory qft provides the framework for many fundamental theories in modern physics and over the last few years there has been growing interest in its historical and philosophical foundations this anthology on the foundations of qft brings together 15 essays by well known researchers in physics the philosophy of physics and analytic philosophy many of these essays were first presented as papers at the conference ontological aspects of quantum field theory held at the zentrum f r interdisziplin re forschung zif bielefeld germany the essays contain cutting edge work on ontological aspects of qft including the role of measurement and experimental evidence corpuscular versus field theoretic interpretations of qft the interpretation of gauge symmetry and localization this book is ideally suited to anyone with an interest in the foundations of quantum physics including physicists philosophers and historians of physics as well as general readers interested in philosophy or science

hermeneutics and modern philosophy is a collection of interpretive and critical essays on philosophical hermeneutics focusing on the seminal work of heidegger and gadamer the anthology brings together classic pieces in the field that previously were widely scattered and includes articles that shed light on issues in contemporary hermeneutics

the authors matteo collodel and eric oberheim take the reader on a journey through the early life of the famous austrian philosopher paul feyerabend whose groundbreaking work against the method forged new paths in the philosophical understanding of science collodel and oberheim s book contains the translated correspondence of feyerabend 1924 1994 with equally influential philosophers and scientists of the time including rudolf carnap herbert feigl carl g hempel j j c smart david bohm and thomas kuhn this book offers an entirely unique approach to the philosopher paul feyerabend informative challenging and profound it immerses the reader deeply in the mind of a truly revolutionary philosopher of science the main focus lies on the explanation of paul feyerabend s ideas on logical empiricism and quantum mechanics which he developed especially in the 1960s in order to appreciate the celebrated work of the philosopher it is important to create an understanding of these formative years in feyerabend s life and work anyone who knows similar discussions like the paradigm shift of thomas kuhn or has a passion for history philosophy and science will be fascinated by the works of paul feyerabend as scientists and followers of feyerabend collodel and oberheim strive to pay respect to the philosopher and to make his work accessible to a whole new generation

the scope of the project the concept of holism is at the centre of far reaching changes in various areas of philosophy in the second half of the twentieth century holism in epistemology and the philosophy of mind is widespread among analytic philosophers subsequent to the work of the later wittgenstein and to quine s two dogmas of empiricism roughly speaking the claim is that a for a person to have beliefs a social linguistic community is required and that b single beliefs have a meaning only within a whole system of beliefs furthermore holism is discussed in science in particular in the interpretation of quantum physics in fact the term holism goes back to smuts 1926 who introduces this term in a biological context i holism in any of these areas has considerable consequences for our philosophical view of the world and ourselves holism in quantum physics is said to refute atomism which has been predominant in modern philosophy of nature holism in epistemology and the philosophy of mind is seen as an alternative to what is known as the cartesian tradition which dominated modern thought down to logical empiricism

he concludes that objectification rests on the productive power of imagination a process that involves temporality which is the basic constitution of humans as beings

die augen hat mir husserl eingesetzt 1 the aim of twentieth century phenomenology is to provide a non t psychologistic interpretation of subjectivity husserl agrees with frege to adopt psychologism is to give up truth but this should not prevent us from investigating the subjective perspective on the contrary husserl thinks that an appropriate rejection of psychologism must be able to show how propositions are correlated to and grounded in subjective intuitions without thereby reducing them to psychological phenomena obviously this calls for an interpretation of subjectivity that makes a sharp distinction between the subjective perspective and the psychological realm phenomenology is devoted to the development of a notion of subjectivity that is in accordance with our experience of the world a fundamental tenet of phenomenology is that philosophy should not dispute this experience but rather account for it hence phenomenology must avoid a notion of subjectivity in which it becomes a problem to account for how a subject can ever hook up with the world in other words a phenomenological interpretation of subjectivity must radically disassociate itself from what is often referred to as a worldless cartesian subject a res cogitans but neither can an interpretation of subjectivity consistently advocate a position according to which the human order is described only in the categories appropriate to the physical order such an interpretation is obviously not compatible with the phenomenal basis for undertaking this very interpretation that is our experience of the world
